## Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, Earnings and Hours,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-4090) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Qutre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agregées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Emploi, gains et durée du travail,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-4090) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)

## **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## **Note on CANSIM**

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)951-8200.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## **Note concernant CANSIM**

Quelques données publiées dans l'Emploi, gains et durée du travail (nº 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)951-8200.

## HIGHLIGHTS

## Preliminary Estimates<sup>1</sup>

(Data not seasonally adjusted) - October 1987

Preliminary data for October 1987 showed an estimated 10,206,000 employees at the Canada industrial aggregate level², an increase of 63,000 (+ 0.6%) from the previous month (not adjusted for seasonal variation). This represents a change similar to that observed between September and October in previous years. Compared to October 1986, industrial aggregate employment increased by 2.6%³.

Average weekly earnings for all employees were estimated at \$450.97 for October, up 0.8% from September and 4.4% above the level of October 1986 (not adjusted for inflation), the highest year-to-year increase since June 1984.

## **Employment**

Estimated employment in October in the goods-producing industries was 0.5% lower than in September. Employment estimates for mines, quarries and oil wells increased at a time of year when a decrease is usually observed. The number of employees in the service-producing industries in October was 1.0% higher than in September, similar to the pattern in previous years. There was a smaller than usual decrease in transportation, communication and other utilities and a larger than rusual increase in community, business and personal services. Finance, insurance and real estate showed an increase at a time of year when a decrease is usually observed.

The total number of employees at the Canada industrial aggregate level increased by an estimated 255,000 (+ 2.6%) from October 1986. The year-to-year growth in the goods-producing industries was 5.1%. Mines, quarries and oil wells recorded its highest growth rate of 1987. In contrast, the 1.6% year-to-year change in the service-producing industries was the lowest this year. Transportation, communication and other utilities showed a year-to-year increase for the first time since April 1986. Trade had its lowest year-to-year growth in 18 months.

Estimated employment in Newfoundland, Prince Edward Island and New Brunswick showed smaller than usual decreases between September and October. Nova Scotia increased at a time of year when a decrease is usually observed while Saskatchewan reported a larger than usual increase. On a year-to-year basis, Saskatchewan and Alberta recorded their highest growth rates of 1987.

## **FAITS SAILLANTS**

## Estimations préliminaires<sup>1</sup>

(Données non désaisonnalisées) - Octobre 1987

Selon les données préliminaires non désaisonnalisées, le nombre de salariés pour l'ensemble des activités économiques² au Canada a atteint 10,206,000 en octobre 1987, une augmentation de 63,000 (+ 0.6%) par rapport au mois précédent. Ceci représente un changement semblable à celui observé dans le passé à ce temps-ci de l'année. Par rapport à octobre 1986, le nombre de salariés pour l'ensemble des activités économiques a augmenté de 2.6%³.

En octobre 1987, la rémunération hebdomadaire moyenne pour l'ensemble des salariés est estimée à \$450.97, soit une hausse de 0.8% par rapport à septembre et de 4.4% supérieure à celle du mois d'octobre 1986 (non ajustée pour l'inflation). Il s'agit du taux de croissance annuel le plus élevé depuis juin 1984

## **Emploi**

En octobre 1987, l'estimation du nombre de salariés de la branche productrice de biens est de 0.5% inférieure à celle de septembre. Le nombre de salariés dans les mines, carrières et puits de pétrole est à la hausse alors que des diminutions sont habituellement observées à cette période de l'année. Le nombre de salariés de la branche productrice de services a enregistré un gain de 1.0% par rapport à septembre, démontrant un comportement semblable à celui observé dans les années antérieures entre ces deux mois. Les transports, communications et autres services publics ont rapporté une diminution plus faible que par les années passées, alors que les services socio-culturels, communautaires et personnels enregistraient une hausse plus forte qu'à l'ordinaire. Les finances, assurances et affaires immobilières sont à la hausse alors qu'une diminution est habituellement observée à ce temps-ci de l'année.

En regard d'octobre 1986, l'estimation du nombre de salariés au niveau de l'ensemble des activités économiques au Canada montrait une hausse de 255,000 (+ 2.6%). Le taux de croissance annuel dans la branche productrice de biens a atteint 5.1%, alors que les mines, carrières et puits de pétrole enregistraient leur plus haut taux de croissance jusqu'ici en 1987. Le taux de variation annuel dans la branche productrice de services était de 1.6%, son plus bas niveau cette année. L'industrie des transports, communications et autres services publics rapportait en octobre sa première augmentation annuelle depuis le mois d'avril 1986. Le commerce enregistrait son plus bas taux de croissance des 18 derniers mois.

L'estimation du nombre de salariés à Terre-Neuve, à l'Île-du-Prince-Édouard et au Nouveau-Brunswick montrait, entre septembre et octobre, des diminutions plus faibles qu'à l'ordinaire. La Nouvelle-Écosse augmentait à un moment de l'année où une diminution est ordinairement observée. La Saskatchewan enregistrait une augmentation plus forte que d'habitude. Sur une base annuelle, la Saskatchewan et l'Alberta enregistraient leurs plus hauts taux de croissance depuis le début de l'année.

## **Earnings**

Between September and October, average weekly earnings for all employees in the goods-producing industries were up 1.1%. Forestry and mines, quarries and oil wells showed smaller than usual increases. In the service-producing industries, average weekly earnings rose by 0.8% at a time of year when a decrease is usually observed. Trade and finance, insurance and real estate showed larger than usual increases between September and October. Community, business and personal services increased at a time of year when this industry usually decreases.

Compared to October 1986, average weekly earnings increased by \$19.15 (+ 4.4%). In the goods-producing industries, the increase was 4.2%. The year-to-year growth was 4.2% in the service-producing industries, the highest of 1987. Finance, insurance and real estate and community, business and personal services recorded their highest growth rates of 1987.

Provincially, average weekly earnings increased less than usual between September and October 1987 in Prince Edward Island and more than usual in New Brunswick and Quebec. Ontario and British Columbia increased at a time of year when a decrease is usually observed. Alberta showed no change at a time of year when it usually increases. The October year-to-year percentage changes in average weekly earnings were the lowest of 1987 in Newfoundland, Prince Edward Island and Nova Scotia and the highest of 1987 in Quebec, Ontario and British Columbia.

## **Hours and Hourly Earnings**

At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 32.4 in October, a slight increase from September. Average weekly hours were estimated at 39.4 in the goods-producing industries and 28.5 in the service-producing industries.

Average hourly earnings of employees paid by the hour increased from September to an estimated \$11.27 in October. Average hourly earnings were estimated at \$13.12 in the goods-producing industries and \$9.83 in the service-producing industries.

#### Rémunération

Entre septembre et octobre, la rémunération hebdomadaire moyenne pour l'ensemble des salariés dans la branche productrice de biens a augmenté de 1.1%. Les forêts et les mines, carrières et puits de pétrole rapportaient des hausses plus faibles que d'habitude à ce temps-ci de l'année. Dans la branche productrice de services, la rémunération hebdomadaire moyenne a augmenté de 0.8%, alors qu'une diminution est ordinairement observée entre ces deux mois. Le commerce et les finances, assurances et affaires immobilières rapportaient, entre septembre et octobre, des augmentations plus fortes qu'à l'ordinaire. Les services socio-culturels, communautaires et personnels ont montré une augmentation à un moment où une diminution est habituellement observée.

Par rapport à octobre 1986, la rémunération hebdomadaire moyenne augmentait de \$19.15 (+ 4.4%). Dans la branche productrice de biens, l'augmentation était de 4.2%. La croissance annuelle pour la branche productrice de services se situe à son plus haut niveau de l'année, soit à 4.2%. Les finances, assurances et affaires immobilières et les services socio-culturels, communautaires et personnels rapportaient leur plus haut taux de croissance depuis le début de 1987.

Au niveau provincial, entre septembre et octobre, la rémunération hebdomadaire moyenne a augmenté moins que d'habitude à l'Île-du-Prince-Édouard et plus que d'habitude au Nouveau-Brunswick et au Québec. L'ontario et la Colombie-Britannique montraient des augmentations plutôt que les diminutions habituellement rapportées par ces deux provinces à cette période-ci de l'année. L'Alberta ne montre aucun changement alors qu'une augmentation est habituellement observée. Le taux de variation annuelle de la rémunération hebdomadaire moyenne était à son plus bas niveau de l'année 1987 à Terre-Neuve, à l'Îledu-Prince-Édouard et en Nouvelle-Écosse. Le Québec, l'Ontario et la Colombie-Britannique montrent leurs plus hauts taux de croissance de l'année.

## Heures et rémunération horaire

Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 32.4 en octobre 1987, soit légèrement plus haut qu'en septembre. Selon les estimations, le nombre d'heures hebdomadaires moyennes atteignait 39.4 dans la branche productrice de biens et 28.5 dans la branche productrice de services.

En octobre 1987, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$11.27, indiquant une augmentation par rapport à septembre. Elle était estimée à \$13.12 dans la branche productrice de biens et à \$9.83 dans la branche productrice de services.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

<sup>2</sup> The industrial aggregate is the sum of all industries with the exception of agriculture; fishing and trapping; religious organizations; private households and military personnel.

<sup>3</sup> Changes to the survey of Employment, Payrolls and Hours sampling frame were introduced in January 1987. Adjustment factors have been used to remove the estimated impact of these changes from all year-to-year comparisons referred to in the accompanying text. For more information on the changes please consult the May issue of Employment, Earnings and Hours, catalogue 72-002 or contact the Labour Division (613-951-4090).

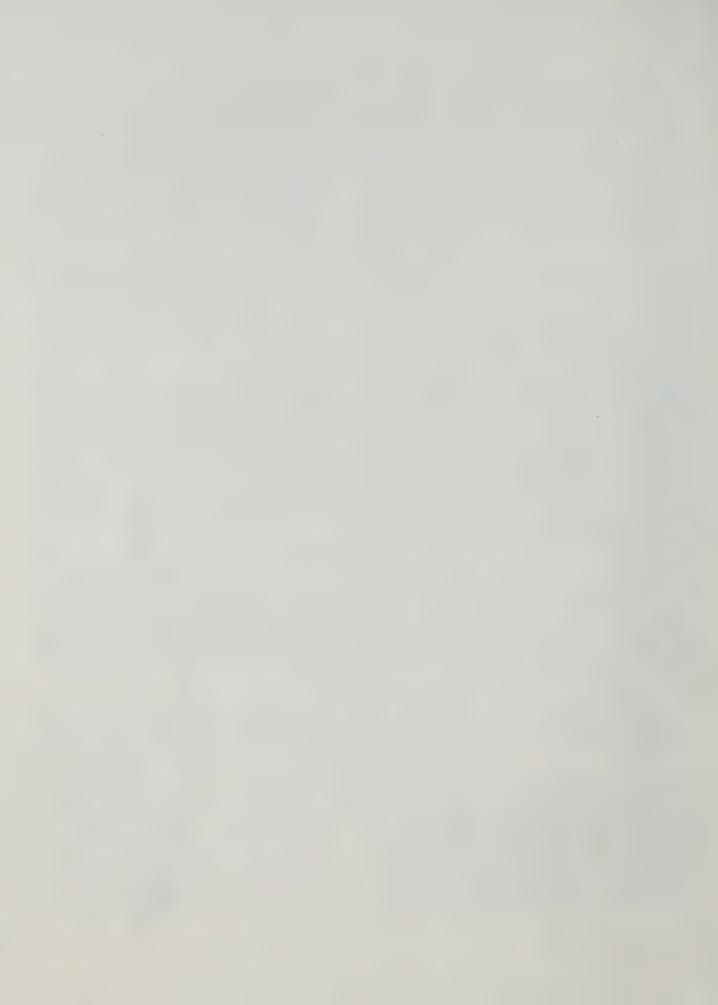

<sup>1</sup> Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", à la fin de cette publication.

<sup>2</sup> L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense.

<sup>&</sup>lt;sup>3</sup> Des modifications à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail ont été introduites en janvier 1987. Des facteurs d'ajustement ont été utilisés pour tenir compte de l'impact de ces changements sur les comparaisons annuelles mentionnées dans le texte. Pour plus d'information sur ces changements, veuillez consulter la publication du mois de mai 1987 d'Emploi, gains et durée du travail ou communiquer avec la Division du travail (613-951-4090).

# **NOTES TO USERS**

# 1. DATA REVISIONS - JANUARY TO APRIL 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and/or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the previous years are required when making comparisons with the 1987 estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division (613-951-4090).

# 2. SAMPLE SIZE INCREASE IN MANUFACTURING INDUSTRIES

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

# 3. INDUSTRIAL COMPOSITE

Note that the publication of the Estimates of Average Weekly Earnings for ''Industrial Composite'' was terminated with the December 1985 estimates.

#### 4. URBAN AREAS

Effective with **June 1985**, data for urban areas have been removed from the publication and the remaining statistical tables have been re-numbered as a result of the changes. (See the June 1985 issue for the conversion from the old to the new table numbers).

# **AVIS AUX UTILISATEURS**

# 1. RÉVISIONS AUX DONNÉEES - JANVIER À AVRIL 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissements à des catégories plus appropriées au niveau de l'activité économique, du lieu géographique ou de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifictions sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH des années antérieures lorsque l'on procède à des comparaisons avec les estimations de 1987. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail (613-951-4090).

# 2. AUGMENTATION DE LA TAILLE DE L'ÉCHANTILLON DANS LES INDUSTRIES MANUFACTURIÈRES

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

#### 3. ENSEMBLE DES INDUSTRIES

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour l''ensemble des industries' ont cessé d'être publiées avec les estimations révisées de décembre, 1985.

#### 4. RÉGIONS URBAINES

À partir de juin 1985, les données pour les régions urbaines ont été supprimées et les tableaux qui font encore partie de cette publication ont été rénumérotés. (Voir la publication de juin 1985, pour la conversion des anciens aux nouveaux numéros de tableaux).

Data for urban areas will continue to be made available to users on request.

Les données pour les régions urbaines sont toujours disponibles sur demande.

# 5. REVISIONS TO HISTORICAL DATA

#### 1984

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for the industries listed below. The revised series appear in the September 1984 issue. All data variables for the following series at the Canada, Provinces and Territories level may be affected:

- 1. Total Number of Employees All Survey Units
- 2. Salaried Employees All Survey Units
- 3. Total Number of Employees Take-All Units
- 4. Salaried Employees Take-All Units

# 5. RÉVISIONS AUX DONNÉES HISTORIQUES

#### 1984

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour les industries mentionnées ci-dessous. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables pour les séries qui suivent aux niveaux du Canada, provinces et territoires peuvent être affectées:

- 1. Nombre total de salariés Ensemble des unités
- 2. Employés Ensemble des unités
- 3. Nombre total de salariés Unités à tirage complet
- 4. Employés Unités à tirage complet

Industry	SIC 1970 CAÉ	Industrie
Industrial aggregate	031 - 951	Ensemble des activités
Goods producing industries	031 - 421	Branches productrices de biens
Construction	404 - 421	Construction
Engineering	406, 409	Génie civil
Other engineering	409	Autre génie civil
Service producing industries	501 - 951	Branches productrices de services
Community, business and personal services	801 - 899	Services socio-culturels, comm. et pers.
Education and related services	801 - 809	Enseignement et services annexes
Education, excluding libraries and museums	809T	Enseignement et services sauf bibliothèques, musées
Education, n.e.s.	809	Enseignement, n.c.a.
Health and Welfare Services	821 - 828	Services médicaux et sociaux
Welfare organizations	828	Organismes de bien-être
Amusement and recreation	841 - 849	Divertissements et loisirs
Theatrical and other Staged Entertainment	845	Services de théâtre et autres spectacles
Misc. amusement and recreation	849	Services divers de divertissements et de loisirs
Services to business management	851 - 869	Services fournis aux entreprises
Engineering and scientific services	864	Bureaux d'études et services scientifiques
Misc. services	891 - 899	Services divers
Misc. services, n.e.s.	899	Services divers, n.c.a.

For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613) 951-4090.

Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613) 951-4090.

# **CONCEPTS AND METHODS**

# **Objectives**

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

#### Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

# **Industrial Classification**

All **firms** are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The **establishment** (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained

# **CONCEPTS ET MÉTHODES**

# **Objectifs**

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

#### Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme **entreprise** désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul ''établissement'' (voir la définition sous la rubrique ''Classement par activité économique'') mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division des profils et du registre des entreprises de Statistique Canada.

# Classement par activité économique

Toutes les entreprises appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un établissement. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification in the "Standard Industrial Classification Manual", Catalogue No. 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

- a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).
- Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.
- Service-producing industries (501 to 951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary nonuniversity educational institutions (805), universities and colleges (806), and education and related services (809).
- Public administration (909-951) contains only the establishments engaged in activities that are gov-

des activités économiques, nº 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.
- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (360-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) — Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- Administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement

ernmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

# **Geographic Classification**

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue No. 12-567.

#### **Definitions**

# 1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

# 2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

# Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", numéro 12-567 au catalogue.

# **Définitions**

# 1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois d'enquête, les données qui en découlent reflètent l'état de grève).

# 2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada, military personnel and persons providing services to an establishment on a contract basis. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

# a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly rate.

#### b) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week.

#### c) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

# d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

# e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

# f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment Le terme "salariés" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

#### a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

#### b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

# c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

# d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

# e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

#### f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le the existing staff or as a short-term replacement for a full-time or part-time teacher.

# 3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

# a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

# b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

#### 4. Hours

# a) Total hours paid

All hours worked, including overtime hours, **plus** hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

# b) Overtime Hours

The total hours for which overtime was paid. These represent the hours worked.

# 5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

# 6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

# 3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

# a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

#### b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

#### 4. Heures

# a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, **plus** les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

# b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

#### 5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

# 6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

# 7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- All firms or organizations with 200 or more employees;
- b) All firms with more than one reporting unit;
- Firms which report their survey data on computer listings rather than on the standard questionnaire;
- Units of government departments and crown corporations;
- e) Units belonging to elementary and secondary schools;
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

# Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

# Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into take-all and take-some categories as defined earlier under Definitions.

# 7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) toutes les entreprises ayant plus d'une unité déclarante:
- c) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- d) unités des services gouvernementaux et des sociétés de la couronne;
- e) unités propres aux écoles primaires et secondaires;
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

# Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

#### Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à tirage complet et les unités à tirage partiel, au sens que nous avons précisé dans la section "Définitions".

# Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units. then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

# Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

# Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

# Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

# Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

# Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large nonrespondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

#### Imputation

Imputation for nonrespondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each nonrespondent.

For the nonresponding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

#### Estimates

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-

# Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

#### Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

# **Imputation**

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

# **Estimations**

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, con-

provincial areas are also produced, treating the subprovince as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

# Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

# Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or coefficient of variation.

Alphabetic symbols of the coefficient of variation are used in this publication (see Tables A to F at the end of this explanatory note) to give an indication of the reliability of the estimates and are based on a 12-month average of the coefficients of variation. The ranges of the coefficients of variation and their corresponding alphabetic indicator are given in the following table.

sidérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

# Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

#### Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée écart-type d'une estimation de sondage. Lorsque l'écart-type est exprimé en pourcentage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation.

Dans la présente publication, nous utilisons des symboles littéraux de coefficient de variation (voir tableaux A à F à la fin de cette note explicative), pour indiquer le degré de fiabilité des estimations; cette symbolisation repose sur la moyenne des coefficients de variation de 12 mois. Les intervalles de confiance des coefficients de variation et les symboles correspondants sont précisés dans le tableau suivant.

# ALPHABETIC INDICATORS OF COEFFICIENT OF VARIATION

# INDICATEURS LITTÉRAUX DU COEFFICIENT DE VARIATION

Alphabetic Indicator	Range of Coefficient of Variation Percent	Indicateur littéral	Intervalle de confiance du coefficient de variation en pourcentage
Α	0 - 1.0	Α	0 - 1.0
В	1.1 - 2.5	В	1.1 - 2.5
С	2.6 - 5.0	С	2.6 - 5.0
D	5.1 - 10.0	D	5.1 - 10.0
Е	10.1 - 15.0	E	10.1 - 15.0
F	15.1 - 25.0	F	15.1 - 25.0
G	> 25.0	G	> 25.0

The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. If intervals from two standard errors below the estimate to two standard errors above the estimate are constructed using each of the above estimates, then approximately 19 out of 20 of the intervals would include the census value. Such an interval is called a 95 percent confidence interval. For example, let the estimate under consideration be the total number of paid employees at Canada level in Construction and say it is 450,000 employees. If the estimate has a reliability indicator A, then assuming that the coefficient of variation of the estimate is 1%, the standard error of the estimate would be 4,500 employees. Therefore, in this case, one can say with 95% confidence that the census value of total paid employees in Construction is included in the interval 441,000 to 459,000 employees.

In general, the estimates of monthly changes are expected to be more reliable than the estimates of levels due to the large overlap of reporting units in the monthly samples and the high correlation between the reported values for two consecutive months.

#### Statistical Presentation

#### 1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the

L'estimation de l'échantillon et son écart-type (établi d'après le coefficient de variation) peuvent servir à construire un intervalle à l'intérieur duquel s'inscrira, sous réserve d'une limite de confiance prédéterminée, la valeur inconnue que l'on obtiendrait par recensement. L'échantillon sur lequel s'appuie notre enquête n'est qu'un des multiples fragments de même taille que nous aurions pu choisir en utilisant le même plan. Les estimations tirées d'autres échantillons du même univers différeraient les unes des autres. Si l'on construisait des intervalles allant de deux écarts-types sous l'estimation à deux écarts-types au-dessus de l'estimation, en utilisant chacune des estimations possibles (selon l'échantillon choisi), environ 19 intervalles sur 20 contiendraient alors la valeur que donnerait un recensement. Ce genre d'intervalle se nomme intervalle de confiance à 95%. Prenons par exemple comme estimation le nombre total de salariés de la construction pour l'ensemble du Canada, et supposons que ce nombre soit 450,000. Si l'indicateur de fiabilité de cette estimation est A, et si son coefficient de variation s'établit à 1%, alors l'écart-type de l'estimation sera de 4,500 salariés. Dans ce cas, on peut donc dire avec 95% de confiance que le nombre total de salariés de la construction, obtenu par recensement, se situe dans l'intervalle 441,000 à 459,000 salariés.

En général, on s'attend à ce que les estimations des variations mensuelles soient plus fiables que les estimations de niveaux, par suite de l'ample chevauchement des unités déclarantes au sein des échantillons mensuels, et de la forte corrélation qui existe entre les valeurs déclarées pour deux mois consécutifs.

# Présentation statistique

#### 1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui

most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

#### Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

# 3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

# 4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

#### 2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'aggrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

# 3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

# 4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

# 5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates is lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

#### 6. CANSIM

Some of the data published in this report are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the CANSIM matrix numbers, the CANSIM series numbers and the types of survey estimates are presented at the end of this explanatory text (see Tables I to V) to provide the user with an easy and quick link to the CANSIM system.

Generally speaking, the CANSIM matrix number identifies a type of survey estimates for a particular geographic area, while the CANSIM series number represents an industrial level. Owing to the different types of data aggregations (all units, take-all units, take-some units) and to the large number of survey estimate types (number of employees, average hourly earnings of hourly-rated employees, etc.), the user will have to follow the steps given hereafter to select the proper CANSIM matrix and series numbers.

- a) Determine the type of tabulated information needed (this will define the value of "x" for the CANSIM series number of Table II):
  - Aggregation of all survey units has the value 1,
  - ii) Aggregation of take-all units has the value 2 and
  - iii) Aggregation of take-some units has the value 3.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

# 5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité soit plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

# 6. CANSIM

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Les intéressés trouveront à la fin de ces notes explicatives des tableaux indiquant les numéros des matrices CANSIM, les numéros des séries CANSIM et les types d'estimations de l'enquête (voir tableaux I à V). Ces tableaux fournissent à l'utilisateur un moyen d'accès facile et rapide au système CANSIM.

De façon générale, le numéro de matrice CANSIM désigne un type d'estimation de l'enquête pour une région géographique particulière, tandis qu'un numéro de série CANSIM désigne un niveau industriel. En raison de la multiplicité des types d'agrégation (ensemble des unités, unités à tirage complet, unités à tirage partiel) et des nombreux types d'estimations de l'enquête (nombre de salariés, salaires horaires moyens des salariés rémunérés à l'heure, etc.), l'utilisateur devra franchir les étapes suivantes pour choisir les bons numéros de matrice et de série CANSIM.

- a) Déterminer le type désiré de totalisation parmi les cas suivants (cette opération définira la valeur de "x" pour le numéro de série CANSIM au tableau II):
  - i) ensemble des unités de l'enquête: vaut 1,
  - ii) unités à tirage complet: vaut 2 et
  - iii) unités à tirage partiel: vaut 3.

- b) Determine the type of survey estimates required; this will provide the value of "y" for the CANSIM series number. This value is obtained by consulting Table I which lists the 19 types of survey estimates; the number of salaried employees, for example, constitutes type 2.
- c) Determine the industrial level needed and refer to the Industry Code column of the CANSIM series number Table II to find the rest of the series number (e.g. Industry Code 031 has series number x.y.1.1.1.1).
- d) Determine the geographical level required and refer to the CANSIM matrix number tables (Tables III to V) to select the appropriate matrix number.

A specific example would be as follows. The "average weekly earnings (including overtime) of all employees" for "all survey units" is needed for the Ontario total manufacturing. The CANSIM series number will be 1.5.1.1.3 according to:

- The "x" value of 1 for the "All survey units" aggregation,
- The "y" value of 5 for the type of survey estimates and
- The tail-end of the series number 1.1.3 for the manufacturing Industry Code 101-399.

The CANSIM matrix number will be 8367 because the type of estimates 5 is required for Ontario.

It should be noted that only two types of survey estimates are available for the Census Agglomerations and Census Metropolitan Areas (i.e. estimates 01: total number of employees, and 05: average weekly earnings (including overtime) of all employees), while nineteen types of estimates are available for Canada and the provinces.

For further information on CANSIM call (613) 951-1150 or write CANSIM Division, Statistics Canada, R.H. Coats BLDG., Ottawa, Ontario, K1A 0T6.

# 7. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

- b) Déterminer le type requis d'estimations de l'enquête; cette opération fixera la valeur de "y" pour le numéro de série CANSIM. On obtient cette valeur en consultant le tableau I, qui contient la liste des 19 types d'estimations de l'enquête; le type "employés", par exemple, a la valeur 2.
- c) Déterminer le niveau industriel désiré et utiliser la colonne "code des industries" du tableau II des numéros de série CANSIM pour trouver les autres chiffres du numéro de série (par ex. le code d'industrie 031 possède le numéro de série x.y.1.1.1).
- Déterminer le niveau géographique requis et utiliser les tableaux de numéros de matrice CANSIM (Tableaux III à V) pour choisir le numéro de matrice approprié.

Voici un exemple. Supposons que l'on veuille connaître la "rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés' de "l'ensemble des unités de l'enquête" pour les manufactures de l'Ontario. Le numéro de série CANSIM sera 1.5.1.1.3, puisque:

- i) la valeur de "x" pour le groupe "ensemble des unités de l'enquête" est 1,
- ii) la valeur de "y" pour le type d'estimation est 5, et
- iii) la fin du numéro de série pour le "code d'industrie" des manufactures 101-399 est 1,1,3,

Le numéro de matrice CANSIM sera 8367, car le type d'estimation 5 s'applique à l'Ontario.

Notons qu'il n'existe que deux types d'estimations au niveau des agglomérations de recensement et des régions métropolitaines (i.e.) les estimations 01: nombre total des salariés, et 05: salaires hebdomadaires moyens (y compris le surtemps) pour l'ensemble des salariés), alors qu'il y a dix-neuf types d'estimations disponibles aux niveaux du Canada et des provinces.

Pour de plus amples informations concernant CANSIM, téléphoner à (613) 951-1150 ou écrire à Division CANSIM, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6.

# 7. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

# TABLE I. Type of Estimates

# TABLEAU I. Type d'estimations

stimates timations	Description								
1	All employees - Ensemble des salariés								
2	Salaried employees - Employés								
3	Employees paid by the hour - Salariès rémunérés à l'heure								
4	Other employees - Autres salariés								
5	Average weekly earnings (including overtime) of all employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés								
6	Average weekly earnings (including overtime) of salaried employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des employés								
7	Average weekly earnings (including overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des salariès rémunérés à l'heure								
8	Average weekly earnings (including overtime) of other employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des autres salariés								
9	Average weekly earnings (excluding overtime) of all employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) de l'ensemble des salariés								
10	Average weekly earnings (excluding overtime) of salaried employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des employés								
11	Average weekly earnings (excluding overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des salariés rémunérés à l'heure								
12	Average weekly overtime earnings of all employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, ensemble des salariés								
13	Average weekly overtime earnings of salaried employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, des employés								
14	Average weekly overtime earnings of employees paid by the hour - Rémunération hebdomadaire moyenne pour travail supplémentaire des salariés rémunérés à l'heure								
15	Average weekly hours of salaried employees - Heures hebdomadaires moyennes des employés								
16	Average weekly hours of employees paid by the hour - Heures hebdomadaires moyennes des salariés rémunérés à l'heure								
17	Average weekly overtime hours of employees paid by the hour - Heures supplémentaires hebdomadaires moyennes des salariés rémunérés à l'heure								
19	Average hourly earnings (including overtime) of employees paid by the hour - Rémunération horaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure								
20	Average hourly overtime earnings of employees paid by the hour - Rémunération horaire moyenne du travail supplémentaire, des salariés rémunérés à l'heure

**Employment, Earnings and Hours** - Annual Averages, 1983 to 1986

Annual averages of employment, earnings and hours data for the years 1983 to 1986 are now available.

Estimates by detailed industry, for Canada, the provinces and territories, and estimates for selected metropolitan or urban areas are available in hard copy or on micro-computer diskettes.

User-specified tabulations can be provided on a cost-recovery basis.

A summary of these data is also available in a report entitled: *Annual Averages and Time Series*, 1983-1986. This report is available at the cost of \$50.00/copy from Statistics Canada reference centres (see inside front cover) or from the Labour Division.

For more information, please contact:

Emploi, gains et durée du travail - 1983 à 1986 - Moyennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail, pour les années 1983 à 1986, sont maintenant disponibles.

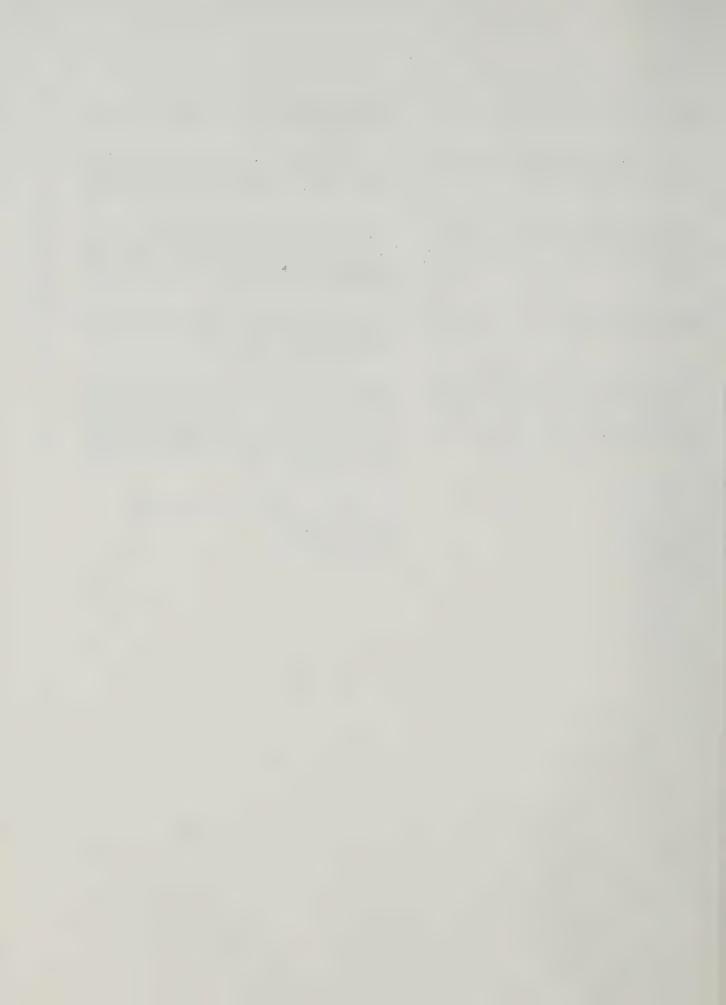

Des estimations détaillées par industries pour le Canada, les provinces et territoires ainsi que pour certaines régions métropolitaines ou urbaines sont disponibles sur divers supports (imprimés d'ordinateurs et disquettes).

Des totalisations définies selon les besoins des utilisateurs peuvent être préparées moyennant le recouvrement des coûts.

Un sommaire de ces données est aussi disponible dans un rapport intitulé: *Moyennes annuelles et séries chronologiques, 1983-1986.* Ce rapport est disponible au coût de \$50.00/copie auprès des Centres de consultation de Statistique Canada (voir au verso de la page couverture) ou de la Division du travail.

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, Earnings and Hours

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)951-8200.

#### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### **Note concernant CANSIM**

Quelques données publiées dans l'Emploi, gains et durée du travail (nº 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)951-8200.

#### Highlight

#### Preliminary Estimates<sup>1</sup>

(data not seasonally adjusted) - November 1987

Preliminary data for November 1987 showed an estimated 10,126,000 employees at the Canada industrial aggregate level<sup>2</sup>, a decrease of 46,000 (-0.4%) from the previous month (not adjusted for seasonal variation). This reflects a change similar to that observed between October and November in previous years. Compared to November 1986, industrial aggregate employment increased by 2.2%.<sup>3</sup>

Average weekly earnings for all employees were estimated at \$450.89 for November, down 0.2% from October but up 4.5% from the November 1986 level (not adjusted for inflation).

#### **Employment**

Estimated employment in November in the goods-producing industries was 1.4% lower than in October. Employment estimates in the forestry, manufacturing and construction industries decreased less than usual for this time of year. The number of employees in the service-producing industries in November was 0.1% lower than in October, at a time of year when an increase is usually observed. Finance, insurance and real estate showed an increase at a time of year when a decrease is usually observed while community, business and personal services decreased at a time of year when an increase is usually observed.

The total number of employees at the Canada industrial aggregate leve I increased by an estimated 214,000 (+2.2%) from November 1986. The year-to-year growth in the goods-producing industries was 5.8% with manufacturing recording its highest growth rate of 1987. In contrast, the 0.9% year-to-year change in the service-producing industries was the lowest this year. Trade showed a year-to-year decrease for the first time since April 1986 and community, business and personal services reported its lowest growth rate of the year.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

The industrial aggregate is the sum of all industries with the exception of agriculture, fishing and trapping, religious

organizations, private households and military personnel
Changes to the survey of employment, payrolls and hours sampling frame were introduced in January 1987. Adjustment factors have been used to remove the estimated impact of these changes from all year-to-year comparisons referred to in the accompanying text. For more information on the changes please consult the May issue of Employment, Earnings and Hours (72-002) or contact the Labour Division.

#### Faits saillants

#### Estimations préliminaires<sup>1</sup>

(Données non désaisonnalisées) - Novembre 1987

Selon les données préliminaires non désaisonnalisées, le nombre de salariés pour l'ensemble des activités économiques² au Canada a atteint 10,126,000 en novembre 1987, une diminution de 46,000 (-0.4%) par rapport au mois précédent. Ceci représente un changement semblable à celui observé antérieurement à ce temps-ci de l'année. Par rapport à novembre 1986, le nombre de salariés pour l'ensemble des activités économiques a augmenté de 2.2%.<sup>3</sup>

En novembre 1987, la rémunération hebdomadaire moyenne pour l'ensemble des salariés était estimée à \$450.89, soit une baisse de 0.2% par rapport à octobre et une hausse de 4.5% comparativement au mois de novembre 1986 (non ajustée pour l'inflation).

#### **Emploi**

En novembre 1987, l'estimation du nombre de salariés de la branche productrice de biens est de 1.4% inférieure à celle d'octobre. Le nombre de salariés dans les forêts, les manufactures et dans la construction montrait des diminutions plus faibles que celles habituellement observées à cette période de l'année. Le nombre de salariés de la branche productrice de services à enregistré une baisse de 0.1% en regard d'octobre, alors qu'une augmentation est ordinairement rapportée pendant cette période de l'année. Les finances, assurances et affaires immobilières sont à la hausse alors qu'une diminution est habituellement observée à ce temps-ci de l'année. Par contre, les services socio-culturels, commerciaux et personnels rapportaient une baisse plutôt que la hausse habituellement enregistrée entre octobre et novembre.

En regard de novembre 1986, l'estimation du nombre de salariés au niveau de l'ensemble des activités économiques au Canada montrait une hausse de 214,000 (+2.2%). Le taux de croissance annuel dans la branche productrice de biens a atteint 5.8%, alors que les industries manufacturières enregistraient leur plus haut taux de croissance jusqu'ici en 1987. Le taux de variation annuel dans la branche productrice de services était de 0.9%, son plus bas niveau cette année. Le commerce enregistrait sa première diminution annuelle depuis avril 1986. Les services socio-culturels, commerciaux et personnels rapportaient leur plus bas taux de croissance de l'année.

Voir la partie "Présentation statistique" sous la rubrique "Concepts et méthodes" à la fin de cette publication

L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense

Des modifications à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail ont été introduites en janvier 1987. Des facteurs d'ajustements ont été utilisés pour tenir compte de l'impact de ces changements sur les comparaisons annuelles mentionnées dans le texte. Pour plus d'information sur ces changements, veuillez consulter la publication du mois de mai 1987 d'Emploi, gains et durée du travail ou communiquer avec la Division du travail (613-951-4090).

Estimated employment in Prince Edward Island and British Columbia showed smaller than usual decreases between October and November. New Brunswick and Saskatchewan increased at a time of year when decreases are usually observed while Quebec and Manitoba reported larger than usual decreases. On a year-to-year basis, Nova Scotia, Ontario and Manitoba recorded their lowest growth rates of 1987, whereas Saskatchewan recorded its highest.

#### **Average Weekly Earnings**

Between October and November, average weekly earnings for employees in the goods-producing industries were down 0.3%. Earnings in manufacturing were virtually unchanged at a time of year when they usually increase. In the service-producing industries, average weekly earnings showed little change from October. Transportation, communication and other utilities showed a smaller than usual increase between October and November due to a labour dispute. Finance, insurance and real estate reported a larger than usual decrease.

Compared to November 1986, average weekly earnings increased by \$19.52 (+4.5%). The year-to-year growth was 3.8% in the goods-producing industries and 4.4% in the service-producing industries. Community, business and personal services showed its highest growth rate of 1987.

Provincially, average weekly earnings in Quebec and Ontario decreased between October and November, a time when increases are usually observed. The November year-to-year percentage increases in average weekly earnings were the lowest of 1987 in Prince Edward Island and the highest of 1987 in Alberta.

#### **Hours and Hourly Earnings**

At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 32.1 in November, a slight decrease from October. Average weekly hours were estimated at 39.0 in the goods-producing industries and 28.4 in the service-producing industries.

Average hourly earnings of employees paid by the hour were an estimated \$11.30 in November. Average hourly earnings were estimated at \$13.16 in the goods-producing industries and \$9.89 in the service-producing industries.

L'estimation du nombre de salariés dans les provinces de l'île-dù-Prince-Édouard et de la Colombie-Britannique montrait, entre octobre et novembre, des diminutions plus faibles qu'à l'ordinaire. Le Nouveau-Brunswick et la Saskatchewan ont enregistré des gains à un moment de l'année où une diminution est ordinairement observée. Le Québec et le Manitoba rapportaient des diminutions plus fortes que d'habitude. Sur une base annuelle, la Nouvelle-Écosse, l'Ontario et le Manitoba enregistraient leurs plus bas taux de croissance depuis le début de l'année, alors que la Saskatchewan était à son plus haut niveau.

#### Rémunération hebdomadaire moyenne

Entre octobre et novembre, la rémunération hebdomadaire moyenne pour l'ensemble des salariés dans la branche productrice de biens a diminué de 0.3%. La rémunération dans les industries manufacturières était virtuellement inchangée alors qu'une augmentation est habituellement observée à ce temps-ci de l'année. Dans la branche productrice de services, la rémunération hebdomadaire moyenne était peu changée en rapport à octobre. En raison d'un conflit de travail, les transports, communications et autres services publics rapportaient une augmentation moins forte que d'habitude entre octobre et novembre. Les finances, assurances et affaires immobilières ont montré une diminution plus forte que celle habituellement observée.

Par rapport à novembre 1986, la rémunération hebdomadaire moyenne augmentait de \$19.52 (+4.5%). La croissance annuelle était de 3.8% pour la branche productrice de biens et de 4.4% pour la branche productrice de services. Les services socio-culturels, commerciaux et personnels rapportaient leur plus haut taux de variation annuelle depuis le début de 1987.

Au niveau provincial, la rémunération hebdomadaire moyenne au Québec et en Ontario a diminué alors qu'elle augmente normalement entre octobre et novembre. Le taux d'augmentation annuelle de la rémunération hebdomadaire moyenne était à son plus bas niveau de l'année 1987 à l'île-du-Prince-Édouard et à son plus haut niveau de l'année en Alberta.

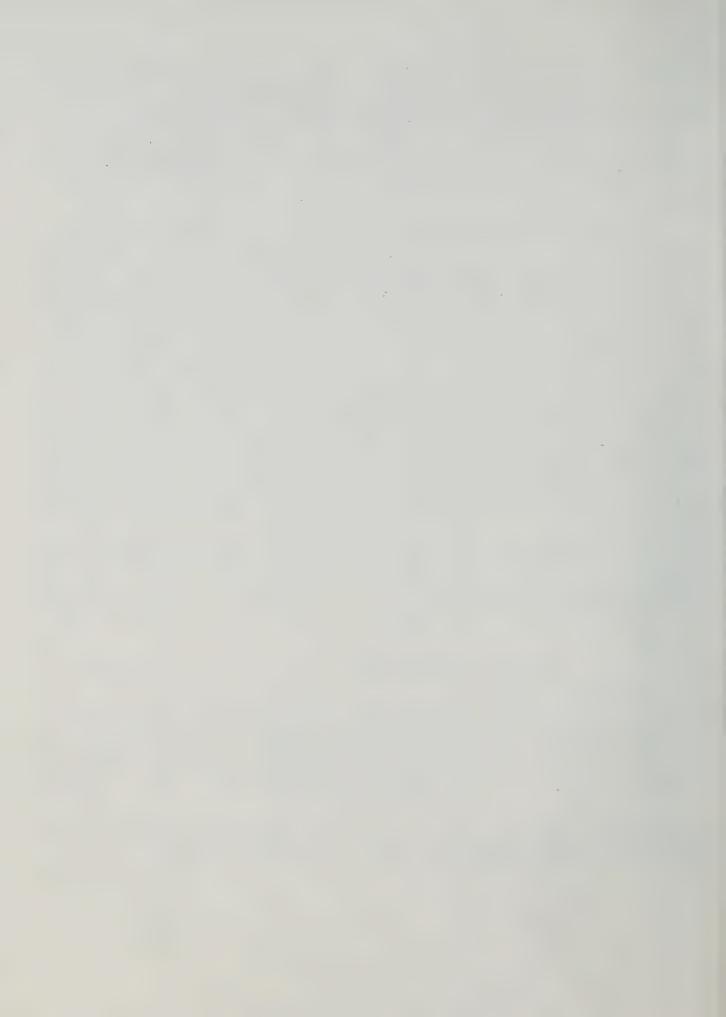

#### Heures et rémunération horaire

Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 32.1 en novembre 1987, soit légèrement plus bas qu'en octobre. Selon les estimations, le nombre d'heures hebdomadaires moyennes atteignait 39.0 dans la branche productrice de biens et 28.4 dans la branche productrice de services.

En novembre 1987, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$11.30. Elle était estimée à \$13.16 dans la branche productrice de biens et à \$9.89 dans la branche productrice de services.

Concepts and methods are described at the back of this publication. Les concepts et méthodes sont décrits à la fin de la présente publication.

## **NOTES TO USERS**

# 1. DATA REVISIONS - JANUARY TO APRIL 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and/or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the previous years are required when making comparisons with the 1987 estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division (613-951-4090).

# 2. SAMPLE SIZE INCREASE IN MANUFACTURING INDUSTRIES

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

# 3. INDUSTRIAL COMPOSITE

Note that the publication of the Estimates of Average Weekly Earnings for ''Industrial Composite'' was terminated with the December 1985 estimates.

#### 4. URBAN AREAS

Effective with **June 1985**, data for urban areas have been removed from the publication and the remaining statistical tables have been re-numbered as a result of the changes. (See the June 1985 issue for the conversion from the old to the new table numbers).

# **AVIS AUX UTILISATEURS**

# 1. RÉVISIONS AUX DONNÉEES - JANVIER À AVRIL 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissements à des catégories plus appropriées au niveau de l'activité économique, du lieu géographique ou de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifictions sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH des années antérieures lorsque l'on procède à des comparaisons avec les estimations de 1987. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail (613-951-4090).

# 2. AUGMENTATION DE LA TAILLE DE L'ÉCHANTILLON DANS LES INDUSTRIES MANUFACTURIÈRES

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

# 3. ENSEMBLE DES INDUSTRIES

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour l''énsemble des industries' ont cessé d'être publiées avec les estimations révisées de décembre, 1985

#### 4. RÉGIONS URBAINES

À partir de juin 1985, les données pour les régions urbaines ont été supprimées et les tableaux qui font encore partie de cette publication ont été rénumérotés. (Voir la publication de juin 1985, pour la conversion des anciens aux nouveaux numéros de tableaux).

Data for urban areas will continue to be made available to users on request.

Les données pour les régions urbaines sont toujours disponibles sur demande.

# 5. REVISIONS TO HISTORICAL DATA

#### 1984

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for the industries listed below. The revised series appear in the September 1984 issue. All data variables for the following series at the Canada, Provinces and Territories level may be affected:

- 1. Total Number of Employees All Survey Units
- 2. Salaried Employees All Survey Units
- 3. Total Number of Employees Take-All Units
- 4. Salaried Employees Take-All Units

# 5. RÉVISIONS AUX DONNÉES HISTORIQUES

#### 1984

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour les industries mentionnées ci-dessous. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables pour les séries qui suivent aux niveaux du Canada, provinces et territoires peuvent être affectées:

- 1. Nombre total de salariés Ensemble des unités
- 2. Employés Ensemble des unités
- 3. Nombre total de salariés Unités à tirage complet
- 4. Employés Unités à tirage complet

Industry	SIC 1970 CAÉ	Industrie
Industrial aggregate	031 - 951	Ensemble des activités

# **CONCEPTS AND METHODS**

# **Objectives**

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

#### Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

# **Industrial Classification**

All **firms** are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The **establishment** (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained

# **CONCEPTS ET MÉTHODES**

# **Objectifs**

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

# Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme **entreprise** désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division des profils et du registre des entreprises de Statistique Canada.

# Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement**. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en unités déclarantes qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification in the "Standard Industrial Classification Manual", Catalogue No. 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

- a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).
- Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.
- c) Service-producing industries (501 to 951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary nonuniversity educational institutions (805), universities and colleges (806), and education and related services (809).
- Public administration (909-951) contains only the establishments engaged in activities that are gov-

des activités économiques, n<sup>O</sup> 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.
- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaûx (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (360-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) — Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- Administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement

ernmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

# **Geographic Classification**

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue No. 12-567.

#### **Definitions**

# 1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

# 2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

# Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", numéro 12-567 au catalogue.

#### **Définitions**

# 1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois d'enquête, les données qui en découlent reflètent l'état de grève).

## 2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada, military personnel and persons providing services to an establishment on a contract basis. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

# a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly rate.

# b) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week

# c) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

## d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

# e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

## f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment Le terme "salariés" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

## a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

#### b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

#### c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

## d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

## e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

# f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le the existing staff or as a short-term replacement for a full-time or part-time teacher.

# 3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

## a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

# b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

#### 4. Hours

# a) Total hours paid

All hours worked, including overtime hours, plus hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

#### b) Overtime Hours

The total hours for which overtime was paid. These represent the hours worked.

# 5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

# 6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

## 3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

#### a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

## b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

#### 4. Heures

# a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, **plus** les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

# b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

# 5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

## 6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

# 7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- All firms or organizations with 200 or more employees;
- b) All firms with more than one reporting unit;
- Firms which report their survey data on computer listings rather than on the standard questionnaire;
- Units of government departments and crown corporations;
- Units belonging to elementary and secondary schools;
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

# Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

# Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into take-all and take-some categories as defined earlier under Definitions.

# 7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) toutes les entreprises ayant plus d'une unité déclarante;
- c) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- d) unités des services gouvernementaux et des sociétés de la couronne;
- e) unités propres aux écoles primaires et secondaires;
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

# Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

### **Stratification**

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons précisé dans la section "Définitions".

## Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units. then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

# Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

# Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

# Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

## Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

### Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large nonrespondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

#### **Imputation**

Imputation for nonrespondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each nonrespondent.

For the nonresponding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

# **Estimates**

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-

#### Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

#### Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

#### **Imputation**

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

## **Estimations**

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, con-

provincial areas are also produced, treating the subprovince as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

# Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

#### Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or coefficient of variation.

Alphabetic symbols of the coefficient of variation are used in this publication (see Tables A to F at the end of this explanatory note) to give an indication of the reliability of the estimates and are based on a 12-month average of the coefficients of variation. The ranges of the coefficients of variation and their corresponding alphabetic indicator are given in the following table.

sidérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

#### Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

#### Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée **écart-type** d'une estimation de sondage. Lorsque l'écart-type est exprimé en pourcentage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation.

Dans la présente publication, nous utilisons des symboles littéraux de coefficient de variation (voir tableaux A à F à la fin de cette note explicative), pour indiquer le degré de fiabilité des estimations; cette symbolisation repose sur la moyenne des coefficients de variation de 12 mois. Les intervalles de confiance des coefficients de variation et les symboles correspondants sont précisés dans le tableau suivant.

# ALPHABETIC INDICATORS OF COEFFICIENT OF VARIATION

# INDICATEURS LITTÉRAUX DU COEFFICIENT DE VARIATION

Alphabetic Indicator	Range of Coefficient of Variation Percent	Indicateur littéral	Intervalle de confiance du coefficient de variation en pourcentage
Α	0 - 1.0	A	0 - 1.0
В	1.1 - 2.5	В	1.1 - 2.5
С	2.6 - 5.0	С	2.6 - 5.0
D	5.1 - 10.0	D	5.1 - 10.0
E	10.1 - 15.0	E	10.1 - 15.0
F	15.1 - 25.0	F	15.1 - 25.0
G	> 25.0	G	> 25.0

The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. If intervals from two standard errors below the estimate to two standard errors above the estimate are constructed using each of the above estimates, then approximately 19 out of 20 of the intervals would include the census value. Such an interval is called a 95 percent confidence interval. For example, let the estimate under consideration be the total number of paid employees at Canada level in Construction and say it is 450,000 employees. If the estimate has a reliability indicator A, then assuming that the coefficient of variation of the estimate is 1%, the standard error of the estimate would be 4.500 employees. Therefore, in this case, one can say with 95% confidence that the census value of total paid employees in Construction is included in the interval 441,000 to 459,000 employees.

In general, the estimates of monthly changes are expected to be more reliable than the estimates of levels due to the large overlap of reporting units in the monthly samples and the high correlation between the reported values for two consecutive months.

## **Statistical Presentation**

#### 1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the

L'estimation de l'échantillon et son écart-type (établi d'après le coefficient de variation) peuvent servir à construire un intervalle à l'intérieur duquel s'inscrira, sous réserve d'une limite de confiance prédéterminée, la valeur inconnue que l'on obtiendrait par recensement. L'échantillon sur lequel s'appuie notre enquête n'est qu'un des multiples fragments de même taille que nous aurions pu choisir en utilisant le même plan. Les estimations tirées d'autres échantillons du même univers différeraient les unes des autres. Si l'on construisait des intervalles allant de deux écarts-types sous l'estimation à deux écarts-types au-dessus de l'estimation, en utilisant chacune des estimations possibles (selon l'échantillon choisi), environ 19 intervalles sur 20 contiendraient alors la valeur que donnerait un recensement. Ce genre d'intervalle se nomme intervalle de confiance à 95%. Prenons par exemple comme estimation le nombre total de salariés de la construction pour l'ensemble du Canada, et supposons que ce nombre soit 450,000. Si l'indicateur de fiabilité de cette estimation est A, et si son coefficient de variation s'établit à 1%, alors l'écart-type de l'estimation sera de 4,500 salariés. Dans ce cas, on peut donc dire avec 95% de confiance que le nombre total de salariés de la construction, obtenu par recensement, se situe dans l'intervalle 441,000 à 459,000 salariés.

En général, on s'attend à ce que les estimations des variations mensuelles soient plus fiables que les estimations de niveaux, par suite de l'ample chevauchement des unités déclarantes au sein des échantillons mensuels, et de la forte corrélation qui existe entre les valeurs déclarées pour deux mois consécutifs.

# Présentation statistique

# 1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui

most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

#### Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

# 3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

## 4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

# 2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'aggrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

#### 3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

#### 4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

# 5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates is lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

#### 6. CANSIM

Some of the data published in this report are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the CANSIM matrix numbers, the CANSIM series numbers and the types of survey estimates are presented at the end of this explanatory text (see Tables I to V) to provide the user with an easy and quick link to the CANSIM system.

Generally speaking, the CANSIM matrix number identifies a type of survey estimates for a particular geographic area, while the CANSIM series number represents an industrial level. Owing to the different types of data aggregations (all units, take-all units, take-some units) and to the large number of survey estimate types (number of employees, average hourly earnings of hourly-rated employees, etc.), the user will have to follow the steps given hereafter to select the proper CANSIM matrix and series numbers.

- Determine the type of tabulated information needed (this will define the value of "x" for the CANSIM series number of Table II):
  - Aggregation of all survey units has the value 1,
  - ii) Aggregation of take-all units has the value 2 and
  - iii) Aggregation of take-some units has the value 3.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

# 5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité soit plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

#### CANSIM

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Les intéressés trouveront à la fin de ces notes explicatives des tableaux indiquant les numéros des matrices CANSIM, les numéros des séries CANSIM et les types d'estimations de l'enquête (voir tableaux I à V). Ces tableaux fournissent à l'utilisateur un moyen d'accès facile et rapide au système CANSIM.

De façon générale, le numéro de matrice CANSIM désigne un type d'estimation de l'enquête pour une région géographique particulière, tandis qu'un numéro de série CANSIM désigne un niveau industriel. En raison de la multiplicité des types d'agrégation (ensemble des unités, unités à tirage complet, unités à tirage partiel) et des nombreux types d'estimations de l'enquête (nombre de salariés, salaires horaires moyens des salariés rémunérés à l'heure, etc.), l'utilisateur devra franchir les étapes suivantes pour choisir les bons numéros de matrice et de série CANSIM.

- a) Déterminer le type désiré de totalisation parmi les cas suivants (cette opération définira la valeur de "x" pour le numéro de série CANSIM au tableau II):
  - i) ensemble des unités de l'enquête: vaut 1,
  - ii) unités à tirage complet: vaut 2 et
  - iii) unités à tirage partiel: vaut 3.

- b) Determine the type of survey estimates required; this will provide the value of "y" for the CANSIM series number. This value is obtained by consulting Table I which lists the 19 types of survey estimates; the number of salaried employees, for example, constitutes type 2.
- c) Determine the industrial level needed and refer to the Industry Code column of the CANSIM series number Table II to find the rest of the series number (e.g. Industry Code 031 has series number x.y.1.1.1.1).
- Determine the geographical level required and refer to the CANSIM matrix number tables (Tables III to V) to select the appropriate matrix number.

A specific example would be as follows. The "average weekly earnings (including overtime) of all employees" for "all survey units" is needed for the Ontario total manufacturing. The CANSIM series number will be 1.5.1.1.3 according to:

- The "x" value of 1 for the "All survey units" aggregation,
- The "y" value of 5 for the type of survey estimates and
- The tail-end of the series number 1.1.3 for the manufacturing Industry Code 101-399.

The CANSIM matrix number will be 8367 because the type of estimates 5 is required for Ontario.

It should be noted that only two types of survey estimates are available for the Census Agglomerations and Census Metropolitan Areas (i.e. estimates 01: total number of employees, and 05: average weekly earnings (including overtime) of all employees), while nineteen types of estimates are available for Canada and the provinces.

For further information on CANSIM call (613) 951-1150 or write CANSIM Division, Statistics Canada, R.H. Coats BLDG., Ottawa, Ontario, K1A 0T6.

# 7. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

- b) Déterminer le type requis d'estimations de l'enquête; cette opération fixera la valeur de "y" pour le numéro de série CANSIM. On obtient cette valeur en consultant le tableau I, qui contient la liste des 19 types d'estimations de l'enquête; le type "employés", par exemple, a la valeur 2.
- c) Déterminer le niveau industriel désiré et utiliser la colonne "code des industries" du tableau II des numéros de série CANSIM pour trouver les autres chiffres du numéro de série (par ex. le code d'industrie 031 possède le numéro de série x.y.1.1.1).
- d) Déterminer le niveau géographique requis et utiliser les tableaux de numéros de matrice CANSIM (Tableaux III à V) pour choisir le numéro de matrice approprié.

Voici un exemple. Supposons que l'on veuille connaître la "rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés" de "l'ensemble des unités de l'enquête" pour les manufactures de l'Ontario. Le numéro de série CANSIM sera 1.5.1.1.3, puisque:

- i) la valeur de "x" pour le groupe "ensemble des unités de l'enquête" est 1,
- ii) la valeur de "y" pour le type d'estimation est 5, et
- iii) la fin du numéro de série pour le "code d'industrie" des manufactures 101-399 est 1.1.3.

Le numéro de matrice CANSIM sera 8367, car le type d'estimation 5 s'applique à l'Ontario.

Notons qu'il n'existe que deux types d'estimations au niveau des agglomérations de recensement et des régions métropolitaines (i.e.) les estimations 01: nombre total des salariés, et 05: salaires hebdomadaires moyens (y compris le surtemps) pour l'ensemble des salariés), alors qu'il y a dix-neuf types d'estimations disponibles aux niveaux du Canada et des provinces.

Pour de plus amples informations concernant CANSIM, téléphoner à (613) 951-1150 ou écrire à Division CANSIM, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6.

# 7. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

### TABLE I. Type of Estimates

### TABLEAU I. Type d'estimations

Estimates	Description
1	All employees - Ensemble des salariés
2	Salaried employees - Employés
3	Employees paid by the hour - Salariés rémunérés à l'heure
4	Other employees - Autres salariés
5	Average weekly earnings (including overtime) of all employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés
6	Average weekly earnings (including overtime) of salaried employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des employés
7	Average weekly earnings (including overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure
8	Average weekly earnings (including overtime) of other employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des autres salariés
9	Average weekly earnings (excluding overtime) of all employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) de l'ensemble des salariés
10	Average weekly earnings (excluding overtime) of salaried employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des employés
11	Average weekly earnings (excluding overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des salariés rémunérés à l'heure
12	Average weekly overtime earnings of all employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, ensemble des salariès
13	Average weekly overtime earnings of salaried employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, des employés
14	Average weekly overtime earnings of employees paid by the hour - Rémunération hebdomadaire moyenne pour travail supplémentaire des salariés rémunérés à l'heure
15	Average weekly hours of salaried employees - Heures hebdomadaires moyennes des employés
16	Average weekly hours of employees paid by the hour - Heures hebdomadaires moyennes des salariés rémunérés à l'heure
17	Average weekly overtime hours of employees paid by the hour - Heures supplémentaires hebdomadaires moyennes des salariés rémunérés à l'heure
19	Average hourly earnings (including overtime) of employees paid by the hour - Rémunération horaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure
20	Average hourly overtime earnings of employees paid by the hour - Rémunération horaire moyenne du travail supplémentaire, des salariés rémunérés à l'heure

**Employment, Earnings and Hours** - Annual Averages, 1983 to 1986

Annual averages of employment, earnings and hours data for the years 1983 to 1986 are now available.

Estimates by detailed industry, for Canada, the provinces and territories, and estimates for selected metropolitan or urban areas are available in hard copy or on micro-computer diskettes.

User-specified tabulations can be provided on a cost-recovery basis.

A summary of these data is also available in a report entitled: *Annual Averages and Time Series*, 1983-1986. This report is available at the cost of \$50.00/copy from Statistics Canada reference centres (see inside front cover) or from the Labour Division.

For more information, please contact:

Emploi, gains et durée du travail - 1983 à 1986 - Moyennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail, pour les années 1983 à 1986, sont maintenant disponibles.

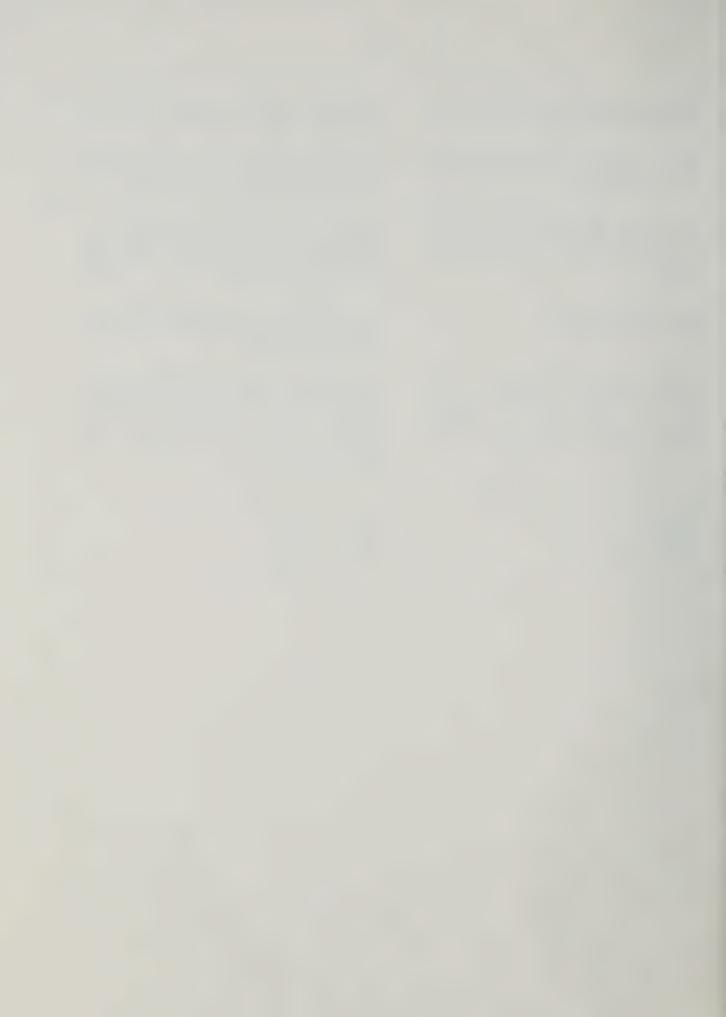

Des estimations détaillées par industries pour le Canada, les provinces et territoires ainsi que pour certaines régions métropolitaines ou urbaines sont disponibles sur divers supports (imprimés d'ordinateurs et disquettes).

Des totalisations définies selon les besoins des utilisateurs peuvent être préparées moyennant le recouvrement des coûts.

Un sommaire de ces données est aussi disponible dans un rapport intitulé: *Moyennes annuelles et séries chronologiques*, 1983-1986. Ce rapport est disponible au coût de \$50.00/copie auprès des Centres de consultation de Statistique Canada (voir au verso de la page couverture) ou de la Division du travail.

# Feature Article

# Article du mois

### REPRINT SERIES OF FEATURE ARTICLES

by Bruce Simpson\*

For the past few years, The Labour Force (71-001) has regularly published feature articles on labour market topics. Recently, analytic articles on selected labour-related topics have also appeared in Employment, Earnings and Hours (72-002). The most popular of these are now available as reprints. In a few cases, articles on related issues have been brought together in one report.

### No. 1 - Long Weeks, Short Weeks

These articles (May 1985, January 1986 and September 1986) examine the extremes in workweeks. One explores the recent growth of long workweeks, examining the socio-demographic and job characteristics of people working 50 or more hours a week. The second focuses on employees with long workweeks, leaving aside the self-employed who have traditionally put in long weeks. The third looks at people working one to five hours a week and weighs their impact on employment estimates.

# \* Bruce Simpson is a publications officer in the Labour and Household Surveys Analysis Division, Statistics Canada.

### SÉRIE DES ARTICLES DE FOND EN RÉIMPRESSION

par Bruce Simpson\*

Au cours des dernières années, la publication La population active (nº 71-001 au catalogue) publie régulièrement des articles de fond qui traitent du marché du travail. Dernièrement, des articles analytiques traitant de sujets reliés au travail ont paru dans la publication Emploi, gains et durée du travail (nº 72-002 au catalogue). Les articles les plus populaires sont désormais disponibles sous forme de réimprimés. Dans quelques cas, les articles portant sur des sujets connexes ont été regroupés en un seul rapport.

## N<sup>o</sup> 1 - Longues semaines, courtes semaines

Ces articles (mai 1985, janvier 1986 et septembre 1986) examinent les différences extrêmes observées dans la longueur des semaines de travail. Un des articles étudie la croissance récente des longues semaines de travail, les caractéristiques sociodémographiques des gens qui travaillent 50 heures ou plus par semaine ainsi que les caractéristiques de leur emploi. Le deuxième rapport porte sur les employés travaillant de longues semaines, à l'exclusion des travailleurs autonomes dont les semaines de travail comptent en général de nombreuses heures. troisième article traite des gens qui travaillent d'une à cinq heures semaine et mesure l'incidence de leur travail sur les estimations de l'emploi.

<sup>\*</sup> Bruce Simpson est agent des publications, Division de l'analyse des enquêtes sur le travail et les ménages, Statistique Canada.

# No. 2 - Previous Work Experience of the Unemployed

Although many unemployed people lose their jobs and immediately begin searching for work, not all of the unemployed fit this pattern. Some choose to leave their job to find a better or more suitable one while others are returning to the labour market after an absence that could range in time from one month to several years. Still others are their first job. for Seasonal and demographic differences in the work antecedents of unemployed persons are set out in these two articles (December 1984, June 1985).

## No. 3 - The Labour Force Participation of Canada's Immigrants

Using 1981 Census data, this report (September 1985) describes the characteristics and the labour force activities of immigrant groups. Place of birth and period of immigration to Canada are among the characteristics examined.

### No. 4 - Long-term Unemployment

These two studies (October 1985, June 1986) were prompted by the dramatic increase in long-term unemployment in the '80s. They examine the socioeconomic characteristics of people unemployed for more than one year, along with the industry and occupation of their last job.

### No. 5 - Hourly Earnings in 1984

Survey of Union on the Membership conducted in 1984, this article (December 1985) looks at the hourly earnings of paid workers by sex, education and other sociodemographic characteristics and provaluable information for disstudies on minimum wage and parties in earnings.

# Nº 2 - Les chômeurs selon leur expérience de travail

Bien que les chômeurs comptent un grand nombre de personnes qui ont perdu leur emploi et qui se sont mis sans délai à en chercher un autre, ils ne respectent cette tendance. Certains pas tous travailleurs quittent leur emploi se trouver un meilleur poste ou un emploi qui leur convient davantage, tandis que d'autres reviennent sur marché du travail après une absence pouvant aller d'un mois à plusieurs années. D'autres encore cherchent tout premier emploi. Les deux articles (décembre 1984 et juin 1985) décrivent les différences saisonnières et démographiques des antécédents de travail des chômeurs.

### Nº 3 - Activité des immigrants sur le marché du travail au Canada

À partir des données du recensement de 1981, ce rapport (septembre 1985) décrit les caractéristiques des groupes d'immigrants et leur activité. Le lieu de naissance et la période d'immigration au Canada figurent parmi les caractéristiques étudiées.

### Nº 4 - Chômage de longue durée

Ces deux études (octobre 1985 et juin 1986) ont été réalisées en raison de la croissance considérable du chômage de longue durée au cours des années 1980. Elles examinent les caractéristiques socio-démographiques des personnes en chômage depuis plus d'un an, ainsi que la branche d'activité et la nature de leur emploi précédent.

### Nº 5 - Rémunération horaire en 1984

Fondé sur les résultats de l'enquête sur l'adhésion syndicale réalisée en 1984, l'article (décembre 1985) analyse la rémunération horaire des travailleurs rémunérés, selon le sexe, les études et d'autres caractéristiques socio-démographiques, et fournit des renseignements utiles pour l'étude du salaire minimum et de la disparité salariale.

### No. 6 - An Overview of Employment Growth in the Services to Business Management Sector

Services to business management are a growth industry, supporting the popular notion that the practice of "contracting out" is on the rise. The report (February 1986) profiles workers in this industry.

# No. 7 - Labour Market Activity of Students During the Summer Vacation: July 1986

Students' prospects in the summer job market improved in 1986. Labour market conditions generally were favourable, and a declining youth population meant that fewer students were competing for available jobs. This article (July 1986) outlines the labour market experiences of students during the different phases of the latest economic cycle.

# No. 8 - Labour Market Activities of High Income Families

Using 1981 Census data, this article (August 1986) examines the labour market characteristics of the families that formed the top income percentile in 1980. Comparisons of participation rates, class of worker and occupation of selected family members are made with all Canadian families.

### No. 9 - Occupational Trends Among Women in Canada: 1976 to 1985

The past decade has seen tremendous growth in female employment, accompanied by changes in the occupational profile of women. An examination (October 1986) of this changing occupational mix shows where part-time employment growth has

### N<sup>o</sup> 6 - Aperçu de la croissance de l'emploi dans le secteur des services aux entreprises

Le secteur des services aux entreprises est en pleine croissance. Cette observation appuie la notion populaire selon laquelle le recours aux marchés de service est à la hausse. Le rapport (février 1986) établit le profil des travailleurs de cette branche d'activité.

### N<sup>o</sup> 7 - Activité des étudiants sur le marché du travail pendant les vacances d'été: juillet 1986

Les étudiants avaient plus de chances de se trouver un emploi d'été en 1986 qu'auparavant. Les conditions du marché du travail étaient en général favorables et, comme la population juvénile est à la baisse, un plus petit nombre de jeunes rivalisaient pour obtenir les emplois disponibles. L'article (juillet 1986) décrit l'expérience du marché du travail des étudiants au cours des diverses phases du dernier cycle économique.

### Nº 8 - Activité des familles à revenu élevé sur le marché du travail

À partir des données du recensement de 1981, l'article (août 1986) explore les caractéristiques relatives au marché du travail des familles dans le percentile supérieur de l'ensemble des familles classées selon leur revenu en 1980. On compare les taux d'activité, la catégorie de travailleur et la profession de certains membres des familles à revenu élevé à ceux de l'ensemble des familles canadiennes.

### N<sup>o</sup> 9 - L'évolution professionnelle des femmes au Canada, 1976 à 1985

Au cours de la dernière décennie, l'emploi chez les femmes a affiché une hausse considérable, et leur profil professionnel a changé. L'article (octobre 1986) examine les changements observés dans les caractéristiques professionnelles des travailleuses, ce

occurred and which occupations are "aging", in the sense that their proportion of young jobholders is falling.

# No. 10 - Recent Industry Trends in Employment: Canada and the Provinces

The swing towards the service sector in the '80s, and labour market disruptions brought about by the recession hit the provinces at different times and to differing degrees. This study (November 1986) is a careful examination of industry changes in every province during the turbulent 1980-1985 period.

### No. 11 - "Involuntary" Part-time Employment in Canada, 1975-1985

People who did not want to work parttime accounted for over 50% of the growth in part-time employment in the ten-year period ending in 1985. In this article (December 1986), the socio-demographic characteristics of involuntary part-time workers are examined and compared with the characteristics of those part-time by choice. Industry and occupation data are also examined.

# No. 12 - Alternative Concepts and Measures of Unemployment

Statistics Canada has developed eight rates of unemployment to supplement the official unemployment rate. This article (February 1987) looks at the theoretical basis of these rates, and at how much they differed from the official rate over the years 1977 to 1986.

qui permet de déterminer les secteurs où l'emploi à temps partiel a progressé et les professions où les travailleuses vieillissent, c'est-à-dire où la proportion de jeunes femmes a chuté.

### Nº 10 - Tendances récentes de l'emploi selon la branche d'activité, Canada et les provinces

La croissance du secteur des services au cours des années 1980 et les perturbations du marché du travail qu'a entraînées la récession ont touché les provinces à différents moments et à différents degrés. L'étude (novembre 1986) examine de près les changements observés dans les branches d'activité, pour chaque province, au cours de la période turbulente de 1980 à 1985.

### Nº 11 - Personnes travaillant à temps partiel "involontairement" au Canada, 1975-1985

Au cours de la décennie qui s'est terminée en 1985, les personnes qui ne voulaient pas travailler à temps partiel ont représenté plus de 50% de la croissance de l'emploi à temps partiel. L'article (décembre 1986) explore les caractéristiques socio-démographiques des personnes travaillant à temps partiel involontairement et les compare à celles des personnes travaillant volontairement à temps partiel. L'article analyse aussi les données sur les branches d'activité et les professions.

# Nº 12 - Mesures et concepts supplémentaires du chômage

Statistique Canada a élaboré huit taux de chômage pour compléter le taux officiel de chômage. L'article (février 1987) examine les concepts de base sur lesquels reposent ces taux et discute de combien ces taux supplémentaires différaient du taux de chômage officiel entre 1977 et 1986.

# No. 13 - Job Loss and Labour Market Adjustment in the Canadian Economy

This is an in-depth study (March 1987) of workers who suffered permanent job loss in the early '80s. It is based on the results of the Displaced Worker Survey conducted in January 1986. Efforts to find new work and the outcome of these efforts are detailed, including the impact on wages.

### No. 14 - Persons On the Margins of the Labour Force

Some people who are not part of the labour force do in fact want to work. This report (April 1987) analyzes their reasons for not seeking work and also tracks changes in the size and composition of this group through the last two economic downturns and recoveries.

# No. 15 - The Growth of Part-time Work in a Changing Industrial Environment

Part of the growth in the proportion of workers employed part-time can be explained by the shift from the goods-producing industries to the service sector, which has traditionally employed a higher proportion of part-time workers. This article (May 1987) analyses this influence and shows how the root causes of part-time employment growth have changed since the end of the recession.

### No. 16 - Employment Estimates from the Labour Force Survey and the Survey of Employment, Payrolls and Hours\*

Every month Statistics Canada publishes employment data from two surveys, the household-based Labour Force Survey and the establishment-

# N<sup>o</sup> 13 - Perte d'un emploi et adaptation au marché du travail dans l'économie canadienne

Cette étude en profondeur (mars 1987) traite des travailleurs qui ont perdu leur emploi au début des années 1980. Elle est fondée sur les résultats de l'enquête auprès des travailleurs déplacés réalisée en janvier 1986. Les démarches effectuées pour trouver un nouvel emploi et les résultats de ces efforts sont décrits, notamment l'effet sur la rémunération.

# N<sup>o</sup> 14 - Les inactifs en marge de la population active

Certaines personnes qui ne font pas partie de la population active veulent travailler. Le rapport (avril 1987) analyse les raisons pour lesquelles ces personnes ne cherchent pas de travail et examine aussi les changements observés dans la taille et la composition de ce groupe au cours des deux dernières périodes de ralentissement et de reprise.

# Nº 15 - La croissance de l'emploi à temps partiel dans un cadre économique en évolution

Une partie de la croissance de la proportion de travailleurs à temps partiel peut s'expliquer par le ralentissement dans les branches productrices de biens et la progression dans le secteur des services qui affiche depuis longtemps une proportion plus élevée de travailleurs à temps partiel. L'article (mai 1987) analyse cette influence et indique comment, depuis la fin de la récession, l'augmentation de l'emploi à temps partiel est attribuable à de nouveaux facteurs.

### Nº 16 - Estimations de l'emploi tirées de l'enquête sur la population active et de l'enquête sur l'emploi, la rémunération et les heures de travail\*

Chaque mois, Statistique Canada publie des données sur l'emploi à partir des deux enquêtes suivantes: enquête sur la population active, dont l'univers est based Survey of Employment, Payrolls and Hours. Although the two complement each other, they yield substantially different employment counts. This article (June 1987) explains why such differences exist by looking at each survey's concepts, coverage and other applicable factors.

\* Also appeared in the April issue of Employment, Earnings and Hours (72-002)

# No. 17 - A Review of Employment and Earnings Data, 1983-1986\*

This article (August 1987) reviews data drawn from the Survey of Employment, Payrolls and Hours in the critical post-recession period of 1983 to 1986. It analyzes the extent of recovery by industrial sub-groups as well as by province using employment, average weekly earnings and hours of work data.

\* Also appeared in the June issue of Employment, Earnings and Hours (72-002)

## No. 18 - Trends in Government Employment, 1976-1986

Government employment over the decade has grown less than employment in the private sector. In addition to examining employment growth at the federal, provincial and local levels of government, the study (September 1987) looks at the composition of government and non-government employment by age, sex and educational attainment.

# No. 19 - Job Search Methods of the Unemployed, 1977-1986

People use a variety of job search methods, but contacting employers directly has traditionally been the

composé de ménages et l'enquête sur l'emploi, la rémunération et les heures de travail, dont l'univers est composé Bien que ces deux d'établissements. enquêtes soient complémentaires, de l'emploi obtenues statistiques différentes. Cet article sensiblement (juin 1987) définit les raisons de ces différences en examinant les concepts et le champ d'observation de chaque enquête ainsi que d'autres facteurs d'intérêt.

\* Également paru dans le numéro d'avril d'Emploi, gains et durée du travail (nº 72-002 au catalogue)

# Nº 17 - Survol des données sur l'emploi et la rémunération, 1983-1986\*

article (août 1987) examine Cet données de l'enquête sur l'emploi, la rémunération et les heures de travail pour les années 1983 à 1986, soit la période critique qui a suivi la récession. L'article analyse l'étendue de la diverses branches les dans reprise d'activité ainsi que dans chacune provinces à partir des données l'emploi, les gains moyens hebdomadaires et les heures de travail.

\* Egalement paru dans le numéro de juin d'Emploi, gains et durée du travail (nº 72-002 au catalogue)

# Nº 18 - Tendances de l'emploi dans le secteur gouvernemental, 1976-1986

Au cours des dix dernières années, l'emploi dans le secteur public a moins augmenté que dans le secteur privé. Dans cet article (septembre 1987), on examine la croissance de l'emploi dans les administrations fédérale, provinciales et locales ainsi que la répartition de l'emploi selon l'âge, le sexe et le niveau d'instruction.

# Nº 19 - Les chômeurs: leurs méthodes de recherche d'emploi, 1977-1986

Il existe de nombreuses méthodes de recherche d'emploi; la plus répandue consiste à entrer directement en contact most common means. However, other methods have either become more or less popular over the past decade. This report (October 1987) explores changing job search patterns, comparing the sexes and different age groups and tracing differences by duration of unemployment.

### No. 20 - Older Workers in the Canadian Labour Market

Since the recession, older workers have had a more difficult time in the labour market. This article (November 1987) provides a labour market profile of Canadians aged 55-64 including such topics as labour force participation, annual work patterns and the types of jobs held or desired.

### HOW TO ORDER

These reprints can be obtained by contacting Central Inquiries (1-800-267-6677), Statistics Canada, R.H. Coats Building, Ottawa K1A 0T6. Presented in bilingual format, with an attractive and sturdy window cover, each reprint costs \$6.00.

avec des employeurs. Toutefois, au cours des dix dernières années, certaines méthodes ont commencé à être plus utilisées tandis que d'autres ont été délaissées. Ce rapport (octobre 1987) analyse les changements qui se sont opérés dans les méthodes de recherche d'emploi, chez les hommes et les femmes, à l'intérieur des différents groupes d'âge. Il examine en outre les différences selon la durée du chômage.

### Nº 20 - Les travailleurs âgés sur le marché du travail canadien

Depuis la récession, les travailleurs âgés éprouvent plus de difficulté sur le marché du travail. Cet article (novembre 1987) offre un profil des canadiens âgés de 55 à 64 ans sur le marché du travail. On y examine des questions telles l'activité, les comportements de travail (sur une période d'un an) ainsi que le genre d'emploi exercé ou recherché.

### VOICI COMMENT COMMANDER

Pour obtenir les articles réimprimés, communiquez avec le Service central de renseignements en composant le numéro 1-800-267-6677, Statistique Canada, Immeuble R.H. Coats, Ottawa K1A 0T6. Les articles sont rédigés dans les deux langues officielles et présentés sous couverture durable, à fenêtre. Chaque article réimprimé coûte \$6.00.

ith the aging of Canada's population, the adequacy of the present system of income maintenance is an ever-present concern. Pension Plans in Canada, 1984 is the seventh in a series of studies on the private pension system. It contains all the relevant details on continuing changes to the 17,700 employer-sponsored pension plans in Canada.

Key characteristics from earlier editions are updated. Within its 96 pages, terms, conditions, trends and developments are explored and highlighted with six charts and 90 tables and text.

Data are included for all occupational pension plans sponsored by employers in both public and private sectors. Such areas as vesting, contribution rates, benefit formulae, eligibility conditions, integration with Canada and Quebec pension plans, retirement ages, pension indexing, contributions paid by employers and employees, number of pensioners and amounts of benefits paid under these plans are studied in historical context. Also included are data on contributors to RRSP's.

Catalogue No. 74-401, \$50 in Canada, \$51 other countries.

vec le vieillissement de population canadienne, l'adéquation du système actuel de sécurité du revenu est une préoccupation constante.

Régimes de pensions au Canada, 1984 est la septième d'une série d'études sur les régimes privés de retraite. Elle contient tous les détails pertinents sur l'évolution permanente des 17,700 régimes de retraite offerts par les employeurs au Canada.

Les renseignements principaux des éditions sont mis à jour. Les conditions, les tendances et les faits nouveaux survenus sont analysés en 96 pages et mis en relief grâce à six graphiques, à 90 tableaux et au texte explicatif.

Les données portent sur tous les régimes de retraite offerts par les employeurs de secteurs public et privé. Les auteurs étudient dans un con texte historique l'acquisition droits, les taux de cotisation. prestations prévues, les cond tions d'admission, l'intégration au Régime de pensions du Canada et au Régime de rent du Québec, l'âge de la retrait l'indexation des prestations, quote-part patronale et la cot tion des employés, le nombre pensionnés et le montant des prestations versées en vertu ces régimes. # What does the average family do with \$30,000?

In 1984 the average family in Canada had a disposable income of \$30,000. Income after Tax, Distribution by Size in Canada, 1984 classifies the after-tax income of Canadian families and indivi-

duals. Income data are given by size of income, region, source of income, family size, number of children, age and sex of the family head, and other characteristics.

Use this report to examine how different policies might affect different socio-economic groups. Study problems of the poor and elderly. Get an accurate reading of the purchasing power of Canadians.

Catalogue #13-210 \$20.00 in Canada \$21.00 other countries 87 pages.

# Que fait une famille type avec \$30,000?

En 1984, le revenu disponible d'une famille canadienne type était de

\$30,000. La publication Revenu après impôt, répartition selon la taille du revenu au Canada, 1984 indique le revenu après impôt des familles et des particuliers canadiens. Les données sur le revenu sont présentées selon la taille du revenu, la région, la source de revenu, la taille de la famille, le nombre d'enfants, l'âge et le sexe du soutien de famille et d'autres caractéristiques.

Ce rapport permet de déterminer l'incidence que peuvent avoir différentes politiques sur divers groupes socio-économiques. Il permet aussi d'étudier les problèmes que rencontrent les personnes pauvres et les personnes âgées et d'obtenir des données précises sur le pouvoir d'achat des Canadiens.

# **Highlights**

Preliminary Estimates<sup>1</sup> (Data not seasonally adjusted) - December 1987

Preliminary data for December 1987 showed an estimated 9,925,000 employees at the Canada industrial aggregate level<sup>2</sup>, a decrease of 163,000 (-1.6%) from the previous month (not adjusted for seasonal variation). This change is similar to that observed between November and December in previous years. Compared to December 1986, industrial aggregate employment increased by 2.1%<sup>3</sup>.

Average weekly earnings for all employees were estimated at \$451.69 for December, up 0.1% from November and up 4.3% from the December 1986 level (not adjusted for inflation).

### **Employment**

Estimated employment in December in the goods-producing industries was 3.0% lower than in November. This decrease is similar to that observed between these months in previous years. The number of employees in the service-producing industries in December was 1.1% lower than in November. Transportation, communication and other utilities and community, business and personal services decreased less than usual for this time of year. Trade showed no change at a time of year when a decrease is usually observed.

The total number of employees at the Canada industrial aggregate level increased by an estimated 200,000 (+2.1%) from December 1986. The year-to-year growth rates rose 4.7% in the goods-producing industries and 1.1% in service-producing industries.

Estimated employment in all provinces except Ontario, Saskatchewan and British Columbia showed smaller than usual decreases between November and December. Newfoundland, Saskatchewan and Alberta recorded their highest year-to-year growth rates of 1987, while British Columbia recorded its lowest.

See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

The industrial aggregate is the sum of all industries with the exception of agriculture, fishing and trapping, religious organizations, private households and military personnel.

# Faits saillants

Estimation préliminaires<sup>1</sup> (Données non désaisonnalisés) - Décembre 1987

Selon les données préliminaires non désaisonnalisées, le nombre de salariés pour l'ensemble des activités économiques² au Canada a atteint 9,925,000 en décembre 1987, une diminution de 163,000 (- 1.6%) par rapport au mois précédent. Ce changement est semblable à celui observé antérieurement à ce temps-ci de l'année. Par rapport à décembre 1986, le nombre de salariés pour l'ensemble des activités économiques a augmenté de 2.1%.³

En décembre 1987, la rémunération hebdomadaire moyenne pour l'ensemble des salariés était estimée à \$451.69, soit une hausse de 0.1% par rapport à novembre et une hausse de 4.3% par rapport au mois de décembre 1986 (non ajustée pour l'inflation).

### **Emploi**

En décembre 1987, l'estimation du nombre de salariés de la branche productrice de biens est de 3.0% inférieure à celle de novembre. Cette variation est semblable à celle observée entre ces deux mois au cours des années antérieures. Le nombre de salariés de la branche productrice de services a enregistré une baisse de 1.1% en regard de novembre. Les transports, communications et autres services publics et les services socio-culturels, commerciaux et personnels montraient des diminutions plus faibles qu'à l'ordinaire. Le commerce ne rapportait aucun changement plutôt que son habituelle diminution.

En regard de décembre 1986, l'estimation du nombre de salariés au niveau de l'ensemble des activités économiques au Canada montrait une hausse de 200,000 (+2.1%). Le taux de croissance annuel dans la branche productrice de biens se situait à 4.7% et dans la branche de services, à 1.1%.

L'estimation du nombre de salariés dans toutes les provinces à l'exception de l'Ontario, de la Saskatchewan et de la Colombie-Britannique montrait, entre novembre et décembre des diminutions plus faibles qu'à l'ordinaire. Sur une base annuelle, Terre-Neuve, la Saskatchewan et l'Alberta enregistraient leurs plus hauts taux de croissance annuelle depuis le début de l'année, alors que la Colombie-Britannique était à son plus bas niveau.

Ohanges to the Survey of Employment, Payrolls and Hours sampling frame were introduced in January 1987. Adjustment factors have been used to remove the estimated impact of these changes from all year to year comparisons referred to in the accompanying text. For more information on the changes please consult the May issue of Employment, Earnings and Hours, catalogue 72-002 or contact the Labour Division.

Voir la "Présentation statistique" sous la rubrique "concepts et méthodes" à la fin de la présente publication.

<sup>2</sup> L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense

Des modifications à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail ont été introduites en janvier 1987. Des facteurs d'ajustements ont été utilisés pour tenir compte de l'impact de ces changements sur les comparaisons annuelles mentionnées dans le texte. Pour plus d'information sur ces changements, veuillez consulter la publication du mois de mai 1987 d'Emploi, gains et durée du travail ou communiquer avec la Division du travail (613-951-4090)

## Average Weekly Earnings

Between November and December, average weekly earnings for employees in the goods-producing industries were down 1.2%. Earnings in manufacturing and construction decreased less than usual for this time of year. In the service-producing industries, average weekly earnings increased by 0.9% between November and December. The larger than usual increase in transportation, communication and other utilities resulted from the settlement of a labour dispute.

Compared to December 1986, average weekly earnings at the Canada industrial aggregate level increased by \$18.56 (+4.3%). The year-to-year growth was 4.4% in the goods-producing industries and 4.0% in the service-producing industries.

Provincially, average weekly earnings in Newfoundland and New Brunswick increased less than usual between November and December. Quebec showed an increase at a time of year when a decrease is usually observed. In Newfoundland and Prince Edward Island, the December year-to-year percentage increases in average weekly earnings were the lowest of 1987.

# **Hours and Hourly Earnings**

At the Canada industrial aggregate level, average weekly hours for employees paid by the hour (who account for approximately half of industrial aggregate employment) were estimated at 31.7 in December, a slight decrease from November. Average weekly hours were estimated at 38.0 in the goods-producing industries and 28.4 in the service-producing industries.

Average hourly earnings of employees paid by the hour were an estimated \$11.28 in December. Average hourly earnings were estimated at \$13.20 in the goods-producing industries and \$9.89 in the service-producing industries.

### Rémunération Hebdomadaire Moyenne

Entre novembre et décembre, la rémunération hebdomadaire moyenne pour l'ensemble des salariés dans la branche productrice de biens a diminué de 1.2%. La rémunération dans les industries manufacturières et dans la construction diminuait moins que d'habitude. Dans la branche productrice de services, la rémunération hebdomadaire moyenne était en hausse de 0.9% par rapport à novembre. Dans les transports, communications et autres services publics, l'augmentation supérieure à celles rapportées au cours des années antérieures résultait du règlement d'un conflit de travail.

Par rapport à décembre 1986, la rémunération hebdomadaire moyenne pour l'ensemble des activités économique augmentait de \$18.56 (+4.3%). La croissance annuelle était de 4.4% pour la branche productrice de biens et de 4.0% pour la branche productrice de services.

Au niveau provincial, la rémunération hebdomadaire moyenne à Terre-Neuve et au Nouveau-Brunswick augmentait moins que d'habitude entre novembre et décembre. Le Québec rapportait une augmentation plutôt que l'habituelle diminution observée à ce temps de l'année. Par rapport à décembre 1986, Terre-Neuve et l'Ile-du-Prince-Édouard rapportaient leur plus bas taux de croissance de leur rémunération hebdomadaire moyenne.

## Heures et rémunération horaire

Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés rémunérés à l'heure (ceux-ci représentent environ la moitié des salariés de l'ensemble des activités économiques) étaient estimées à 31.7 en décembre 1987, soit légèrement plus bas qu'en novembre. Selon les estimations, le nombre d'heures hebdomadaires moyennes atteignait 38.0 dans la branche productrice de biens et 28.4 dans la branche productrice de services.

En décembre 1987, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à \$11.28. Elle était estimée à \$13.20 dans la branche productrice de biens et à \$9.89 dans la branche productrice de services.

#### **NOTES TO USERS**

## 1. DATA REVISIONS - JANUARY TO APRIL 1987

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and/or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

Data for the months of January, February and March 1987 were revised from the originally published information to remove the impact of the phase-in and to provide data for the first four months of 1987 on a consistent basis. The revised data were published in the May 1987 issue of this catalogue.

Adjustments to SEPH data for the previous years are required when making comparisons with the 1987 estimates. Adjustment factors needed to make such comparisons and explanations on their use were published in the May 1987 issue. The factors are also available on request from the Labour Division (613-951-4090).

# 2. SAMPLE SIZE INCREASE IN MANUFACTURING INDUSTRIES

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

# 3. INDUSTRIAL COMPOSITE

Note that the publication of the Estimates of Average Weekly Earnings for "Industrial Composite" was terminated with the December 1985 estimates.

#### 4. URBAN AREAS

Effective with **June 1985**, data for urban areas have been removed from the publication and the remaining statistical tables have been re-numbered as a result of the changes. (See the June 1985 issue for the conversion from the old to the new table numbers).

# **AVIS AUX UTILISATEURS**

# 1. RÉVISIONS AUX DONNÉEES - JANVIER À AVRIL 1987

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissements à des catégories plus appropriées au niveau de l'activité économique, du lieu géographique ou de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifictions sont destinées à améliorer la précision et la fiabilité des estimations. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter des données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données révisées ont été publiées dans le numéro de mai 1987.

Il faut corriger les données de l'EERH des années antérieures lorsque l'on procède à des comparaisons avec les estimations de 1987. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi ont été publiés dans le numéro de mai 1987. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail (613-951-4090).

#### 2. AUGMENTATION DE LA TAILLE DE L'ÉCHANTILLON DANS LES INDUSTRIES MANUFACTURIÈRES

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce cataloque.

#### 3. ENSEMBLE DES INDUSTRIES

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour l''énsemble des industries' ont cessé d'être publiées avec les estimations révisées de décembre, 1985

## 4. RÉGIONS URBAINES

À partir de juin 1985, les données pour les régions urbaines ont été supprimées et les tableaux qui font encore partie de cette publication ont été rénumérotés. (Voir la publication de juin 1985, pour la conversion des anciens aux nouveaux numéros de tableaux).

Data for urban areas will continue to be made available to users on request.

Les données pour les régions urbaines sont toujours disponibles sur demande.

#### 5. REVISIONS TO HISTORICAL DATA

#### 1984

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for the industries listed below. The revised series appear in the September 1984 issue. All data variables for the following series at the Canada, Provinces and Territories level may be affected:

- 1. Total Number of Employees All Survey Units
- 2. Salaried Employees All Survey Units
- 3. Total Number of Employees Take-All Units
- 4. Salaried Employees Take-All Units

#### 5. RÉVISIONS AUX DONNÉES HISTORIQUES

#### 1984

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour les industries mentionnées ci-dessous. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables pour les séries qui suivent aux niveaux du Canada, provinces et territoires peuvent être affectées:

- 1. Nombre total de salariés Ensemble des unités
- 2. Employés Ensemble des unités
- 3. Nombre total de salariés Unités à tirage complet
- 4. Employés Unités à tirage complet

Industry	SIC 1970 CAÉ	Industrie
Industrial aggregate	031 - 951	Ensemble des activités
Goods producing industries	031 - 421	Branches productrices de biens
Construction	404 - 421	Construction
Engineering	406, 409	Génie civil
Other engineering	409	Autre génie civil
Service producing industries	501 - 951	Branches productrices de services
Community, business and personal services	801 - 899	Services socio-culturels, comm. et pers.
Education and related services	801 - 809	Enseignement et services annexes
Education, excluding libraries and museums	809T	Enseignement et services sauf bibliothèques, musées
Education, n.e.s.	809	Enseignement, n.c.a.
Health and Welfare Services	821 - 828	Services médicaux et sociaux
Welfare organizations	828	Organismes de bien-être
Amusement and recreation	841 - 849	Divertissements et loisirs
Theatrical and other Staged Entertainment	845	Services de théâtre et autres spectacles
Misc. amusement and recreation	849	Services divers de divertissements et de loisirs
Services to business management	851 - 869	Services fournis aux entreprises
Engineering and scientific services	864	Bureaux d'études et services scientifiques
Misc. services	891 - 899	Services divers
Misc. services, n.e.s.	899	Services divers, n.c.a.

For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613) 951-4090.

Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613) 951-4090.

# **CONCEPTS AND METHODS**

# **Objectives**

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

#### Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

#### Industrial Classification

All **firms** are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The **establishment** (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained

# **CONCEPTS ET MÉTHODES**

# **Objectifs**

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

### Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme **entreprise** désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division des profils et du registre des entreprises de Statistique Canada.

### Classement par activité économique

Toutes les entreprises appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un établissement. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification in the "Standard Industrial Classification Manual", Catalogue No. 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

- a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).
- Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.
- c) Service-producing industries (501 to 951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).
- d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).
- e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).
- Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).
- g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).
- Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary nonuniversity educational institutions (805), universities and colleges (806), and education and related services (809).
- Public administration (909-951) contains only the establishments engaged in activities that are gov-

des activités économiques, nº 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- a) Ensemble des activités économiques (031-951) Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).
- Branche productrice de biens (031-421) Ce groupe englobe les forêts, les mines, les manufactures et la construction.
- c) Branche des services (501-951) Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).
- d) Fabrication des biens durables (durables) Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).
- e) Fabrication des biens non durables (non dur.) Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (360-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).
- f) Bâtiment (404, 421) Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).
- g) Construction industrielle et lourde (travaux de génie) (406, 409) — Englobe la construction de routes, ponts et rues (406) et autres constructions (409).
- h) Enseignement et services connexes (809T) Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).
- i) Administration publique (909-951) Comprend les établissements dont les activités ont un caractère essentiellement

ernmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

# **Geographic Classification**

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue No. 12-567.

#### **Definitions**

# 1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

#### 2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

# Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", numéro 12-567 au catalogue.

#### **Définitions**

# 1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois d'enquête, les données qui en découlent reflètent l'état de grève).

## 2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada, military personnel and persons providing services to an establishment on a contract basis. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

#### a) Employees paid by the hour

Any employee whose basic wage is expressed as an hourly rate.

# b) Salaried Employees

Any employee whose basic remuneration is a fixed amount for a period of at least one week

## c) Other Employees

Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

# d) Non-teaching Staff

All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

#### e) Teaching Staff

Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

## f) Supply or Substitute Teachers

Teachers who are called in to teach whenever their services are needed either to augment Le terme "salariés" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

#### a) Salariés rémunérés à l'heure

Tout salarié dont la rémunération de base est calculée selon un taux horaire.

#### b) Employés

Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

#### c) Autres salariés

Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

#### d) Personnel non enseignant

Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

# e) Personnel enseignant

Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

## f) Suppléants ou remplaçants

Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le the existing staff or as a short-term replacement for a full-time or part-time teacher.

# 3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

#### a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

## b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

# 4. Hours

#### a) Total hours paid

All hours worked, including overtime hours, plus hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

#### b) Overtime Hours

The total hours for which overtime was paid. These represent the hours worked.

#### Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

#### 6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

#### 3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

#### a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

#### b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

# 4. Heures

## a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, **plus** les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

#### b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

#### 5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

## 6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

#### 7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- All firms or organizations with 200 or more employees;
- b) All firms with more than one reporting unit;
- Firms which report their survey data on computer listings rather than on the standard questionnaire;
- Units of government departments and crown corporations;
- e) Units belonging to elementary and secondary schools;
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

# Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

#### Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into **take-all** and **take-some** categories as defined earlier under Definitions.

# 7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) toutes les entreprises ayant plus d'une unité déclarante;
- c) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- d) unités des services gouvernementaux et des sociétés de la couronne;
- e) unités propres aux écoles primaires et secondaires;
- d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

# Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

#### **Stratification**

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à tirage complet et les unités à tirage partiel, au sens que nous avons précisé dans la section "Définitions".

#### Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units. then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

## Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

# Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

#### Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

#### Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

## Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large nonrespondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

#### **Imputation**

Imputation for nonrespondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each nonrespondent.

For the nonresponding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

#### **Estimates**

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-

#### Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

#### Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

# **Imputation**

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

#### **Estimations**

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, con-

provincial areas are also produced, treating the subprovince as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

## Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

Sampling errors occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

Non-sampling errors are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

#### Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or coefficient of variation.

Alphabetic symbols of the coefficient of variation are used in this publication (see Tables A to F at the end of this explanatory note) to give an indication of the reliability of the estimates and are based on a 12-month average of the coefficients of variation. The ranges of the coefficients of variation and their corresponding alphabetic indicator are given in the following table.

sidérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

#### Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les erreurs d'échantillonnage proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les erreurs non dues à l'échantillonnage ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

## Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée **écart-type** d'une estimation de sondage. Lorsque l'écart-type est exprimé en pourcentage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation.

Dans la présente publication, nous utilisons des symboles littéraux de coefficient de variation (voir tableaux A à F à la fin de cette note explicative), pour indiquer le degré de fiabilité des estimations; cette symbolisation repose sur la moyenne des coefficients de variation de 12 mois. Les intervalles de confiance des coefficients de variation et les symboles correspondants sont précisés dans le tableau suivant.

# ALPHABETIC INDICATORS OF COEFFICIENT OF INDICATEURS LITTÉRAUX DU COEFFICIENT DE VARIATION

Alphabetic Indicator	Range of Coefficient of Variation Percent	Indicateur littéral	Intervalle de confiance du coefficient de variation en pourcentage
Α	0 - 1.0	Α	0 - 1.0
В	1.1 - 2.5	В	1.1 - 2.5
С	2.6 - 5.0	С	2.6 - 5.0
D	5.1 - 10.0	D	5.1 - 10.0
E	10.1 - 15.0	E	10.1 - 15.0
F	15.1 - 25.0	F	15.1 - 25.0
G	> 25.0	G	> 25.0

The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. If intervals from two standard errors below the estimate to two standard errors above the estimate are constructed using each of the above estimates, then approximately 19 out of 20 of the intervals would include the census value. Such an interval is called a 95 percent confidence interval. For example, let the estimate under consideration be the total number of paid employees at Canada level in Construction and say it is 450,000 employees. If the estimate has a reliability indicator A, then assuming that the coefficient of variation of the estimate is 1%, the standard error of the estimate would be 4,500 employees. Therefore, in this case, one can say with 95% confidence that the census value of total paid employees in Construction is included in the interval 441,000 to 459,000 employees.

In general, the estimates of monthly changes are expected to be more reliable than the estimates of levels due to the large overlap of reporting units in the monthly samples and the high correlation between the reported values for two consecutive months.

## Statistical Presentation

#### 1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the

L'estimation de l'échantillon et son écart-type (établi d'après le coefficient de variation) peuvent servir à construire un intervalle à l'intérieur duquel s'inscrira, sous réserve d'une limite de confiance prédéterminée, la valeur inconnue que l'on obtiendrait par recensement. L'échantillon sur lequel s'appuie notre enquête n'est qu'un des multiples fragments de même taille que nous aurions pu choisir en utilisant le même plan. Les estimations tirées d'autres échantillons du même univers différeraient les unes des autres. Si l'on construisait des intervalles allant de deux écarts-types sous l'estimation à deux écarts-types au-dessus de l'estimation, en utilisant chacune des estimations possibles (selon l'échantillon choisi), environ 19 intervalles sur 20 contiendraient alors la valeur que donnerait un recensement. Ce genre d'intervalle se nomme intervalle de confiance à 95%. Prenons par exemple comme estimation le nombre total de salariés de la construction pour l'ensemble du Canada, et supposons que ce nombre soit 450,000. Si l'indicateur de fiabilité de cette estimation est A. et si son coefficient de variation s'établit à 1%, alors l'écart-type de l'estimation sera de 4,500 salariés. Dans ce cas. on peut donc dire avec 95% de confiance que le nombre total de salariés de la construction, obtenu par recensement, se situe dans l'intervalle 441,000 à 459,000 salariés.

En général, on s'attend à ce que les estimations des variations mensuelles soient plus fiables que les estimations de niveaux, par suite de l'ample chevauchement des unités déclarantes au sein des échantillons mensuels, et de la forte corrélation qui existe entre les valeurs déclarées pour deux mois consécutifs.

#### Présentation statistique

#### 1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui

most current month; these are known as revised estimates and are based on a higher rate of response (approximately 90%).

#### Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

# 3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

#### 4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

précède le mois le plus récent; il s'agit d'estimations révisées qui prennent appui sur un taux de réponse plus élevé (environ 90%).

#### 2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'aggrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

#### 3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

#### 4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

#### 5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates is lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

#### 6. CANSIM

Some of the data published in this report are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the CANSIM matrix numbers, the CANSIM series numbers and the types of survey estimates are presented at the end of this explanatory text (see Tables I to V) to provide the user with an easy and quick link to the CANSIM system.

Generally speaking, the CANSIM matrix number identifies a type of survey estimates for a particular geographic area, while the CANSIM series number represents an industrial level. Owing to the different types of data aggregations (all units, take-all units, take-some units) and to the large number of survey estimate types (number of employees, average hourly earnings of hourly-rated employees, etc.), the user will have to follow the steps given hereafter to select the proper CANSIM matrix and series numbers.

- Determine the type of tabulated information needed (this will define the value of "x" for the CANSIM series number of Table II):
  - Aggregation of all survey units has the value 1,
  - ii) Aggregation of take-all units has the value 2 and
  - iii) Aggregation of take-some units has the value 3.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

#### 5. Données non publiées

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détail-lées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité soit plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

#### 6. CANSIM

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Les intéressés trouveront à la fin de ces notes explicatives des tableaux indiquant les numéros des matrices CANSIM, les numéros des séries CANSIM et les types d'estimations de l'enquête (voir tableaux I à V). Ces tableaux fournissent à l'utilisateur un moyen d'accès facile et rapide au système CANSIM.

De façon générale, le numéro de matrice CANSIM désigne un type d'estimation de l'enquête pour une région géographique particulière, tandis qu'un numéro de série CANSIM désigne un niveau industriel. En raison de la multiplicité des types d'agrégation (ensemble des unités, unités à tirage complet, unités à tirage partiel) et des nombreux types d'estimations de l'enquête (nombre de salariés, salaires horaires moyens des salariés rémunérés à l'heure, etc.), l'utilisateur devra franchir les étapes suivantes pour choisir les bons numéros de matrice et de série CANSIM.

- a) Déterminer le type désiré de totalisation parmi les cas suivants (cette opération définira la valeur de "x" pour le numéro de série CANSIM au tableau II):
  - i) ensemble des unités de l'enquête: vaut 1,
  - ii) unités à tirage complet: vaut 2 et
  - iii) unités à tirage partiel: vaut 3.

- b) Determine the type of survey estimates required; this will provide the value of "y" for the CANSIM series number. This value is obtained by consulting Table I which lists the 19 types of survey estimates; the number of salaried employees, for example, constitutes type 2.
- c) Determine the industrial level needed and refer to the Industry Code column of the CANSIM series number Table II to find the rest of the series number (e.g. Industry Code 031 has series number x.y.1.1.1.1).
- d) Determine the geographical level required and refer to the CANSIM matrix number tables (Tables III to V) to select the appropriate matrix number.

A specific example would be as follows. The "average weekly earnings (including overtime) of all employees" for "all survey units" is needed for the Ontario total manufacturing. The CANSIM series number will be 1.5.1.1.3 according to:

- The ''x'' value of 1 for the ''All survey units'' aggregation,
- ii) The "y" value of 5 for the type of survey estimates and
- The tail-end of the series number 1.1.3 for the manufacturing Industry Code 101-399.

The CANSIM matrix number will be 8367 because the type of estimates 5 is required for Ontario.

It should be noted that only two types of survey estimates are available for the Census Agglomerations and Census Metropolitan Areas (i.e. estimates 01: total number of employees, and 05: average weekly earnings (including overtime) of all employees), while nineteen types of estimates are available for Canada and the provinces.

For further information on CANSIM call (613) 951-1150 or write CANSIM Division, Statistics Canada, R.H. Coats BLDG., Ottawa, Ontario, K1A 0T6.

#### 7. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

- b) Déterminer le type requis d'estimations de l'enquête; cette opération fixera la valeur de "y" pour le numéro de série CANSIM. On obtient cette valeur en consultant le tableau I, qui contient la liste des 19 types d'estimations de l'enquête; le type "employés", par exemple, a la valeur 2.
- c) Déterminer le niveau industriel désiré et utiliser la colonne "code des industries" du tableau II des numéros de série CANSIM pour trouver les autres chiffres du numéro de série (par ex. le code d'industrie 031 possède le numéro de série x.y.1.1.1).
- Déterminer le niveau géographique requis et utiliser les tableaux de numéros de matrice CANSIM (Tableaux III à V) pour choisir le numéro de matrice approprié.

Voici un exemple. Supposons que l'on veuille connaître la 'rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés' de 'l'ensemble des unités de l'enquête' pour les manufactures de l'Ontario. Le numéro de série CANSIM sera 1.5.1.1.3, puisque:

- i) la valeur de "x" pour le groupe "ensemble des unités de l'enquête" est 1,
- ii) la valeur de "y" pour le type d'estimation est 5,
- iii) la fin du numéro de série pour le "code d'industrie" des manufactures 101-399 est 1.1.3.

Le numéro de matrice CANSIM sera 8367, car le type d'estimation 5 s'applique à l'Ontario.

Notons qu'il n'existe que deux types d'estimations au niveau des agglomérations de recensement et des régions métropolitaines (i.e.) les estimations 01: nombre total des salariés, et 05: salaires hebdomadaires moyens (y compris le surtemps) pour l'ensemble des salariés), alors qu'il y a dix-neuf types d'estimations disponibles aux niveaux du Canada et des provinces.

Pour de plus amples informations concernant CANSIM, téléphoner à (613) 951-1150 ou écrire à Division CANSIM, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6.

#### 7. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

# TABLE I. Type of Estimates

# TABLEAU I. Type d'estimations

stimates	Description	
1	All employees - Ensemble des salariés	
2	Salaried employees - Employès	
3	Employees paid by the hour - Salariés rémunérés à l'heure	
4	Other employees - Autres salariés	
5	Average weekly earnings (including overtime) of all employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés	
6	Average weekly earnings (including overtime) of salaried employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des employés	
7	Average weekly earnings (including overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure	
8	Average weekly earnings (including overtime) of other employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des autres salariés	
9	Average weekly earnings (excluding overtime) of all employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) de l'ensemble des salariés	
10	Average weekly earnings (excluding overtime) of salaried employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des employés	
11	Average weekly earnings (excluding overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des salariés rémunérés à l'heure	
12	Average weekly overtime earnings of all employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, ensemble des salariés	
13	Average weekly overtime earnings of salaried employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, des employés	
14	Average weekly overtime earnings of employees paid by the hour - Rémunération hebdomadaire moyenne pour travail supplémentaire des salariés rémunérés à l'heure	
15	Average weekly hours of salaried employees - Heures hebdomadaires moyennes des employés	
16	Average weekly hours of employees paid by the hour - Heures hebdomadaires moyennes des salariés rémunérés à l'heure	
17	Average weekly overtime hours of employees paid by the hour - Heures supplémentaires hebdomadaires moyennes des salariès rémunérés à l'heure	
19	Average hourly earnings (including overtime) of employees paid by the hour - Rémunération horaire moyenne (incluant le temps supplémentaire) des salariés rémunérès à l'heure	
20	Average hourly overtime earnings of employees paid by the hour - Rémunération horaire moyenne du travail supplémentaire, des salariés rémunérés à l'heure

**Employment, Earnings and Hours** - Annual Averages, 1983 to 1986

Annual averages of employment, earnings and hours data for the years 1983 to 1986 are now available.

Estimates by detailed industry, for Canada, the provinces and territories, and estimates for selected metropolitan or urban areas are available in hard copy or on micro-computer diskettes.

User-specified tabulations can be provided on a cost-recovery basis.

A summary of these data is also available in a report entitled: *Annual Averages and Time Series*, 1983-1986. This report is available at the cost of \$50.00/copy from Statistics Canada reference centres (see inside front cover) or from the Labour Division.

For more information, please contact:

Emploi, gains et durée du travail - 1983 à 1986 - Moyennes annuelles

Les moyennes annuelles pour l'emploi, la rémunération et les heures de travail, pour les années 1983 à 1986, sont maintenant disponibles.

Des estimations détaillées par industries pour le Canada, les provinces et territoires ainsi que pour certaines régions métropolitaines ou urbaines sont disponibles sur divers supports (imprimés d'ordinateurs et disquettes).

Des totalisations définies selon les besoins des utilisateurs peuvent être préparées moyennant le recouvrement des coûts.

Un sommaire de ces données est aussi disponible dans un rapport intitulé: *Moyennes annuelles et séries chronologiques*, 1983-1986. Ce rapport est disponible au coût de \$50.00/copie auprès des Centres de consultation de Statistique Canada (voir au verso de la page couverture) ou de la Division du travail.

The 1986 Profiles will put you on the fast track to any Canadian community you want to study

You're looking for a fast introduction to the social and demographic realities of a city, a town, a municipality or an entire province. And you don't have the time to wade through piles of statistics.

Focus in on the area of your choice with a CENSUS PRO-FILE. Each PROFILE features more than 46 items of information on the area that interests you... from population counts, to the living arrangements of its elderly.

Choose a PROFILE on any one of

- 6009 Census Subdivisions (municipalities)
- 266 Census Divisions (counties)
- 282 Federal Electoral Districts
- 25 Census Metropolitan Areas
- 114 Census Agglomerations
- a variety of urban/rural breakdowns
  and, more.

With 52 publications in this series, we can fast track you to any destination you want.

For more information, call us at 1-800-267-6677 and request the Census brochure (which includes ordering information), or write us at:

Publications Sales Statistics Canada Ottawa, Ontario K1A OT6 Le Canada et ses régions sont à votre portée grâce aux Profils du recensement de 1986.

Vous désirez connaître le portrait socio-démographique d'une province, d'une ville ou d'une municipalité en particulier, mais la perspective d'avoir à vous battre avec des montagnes de statistiques vous effraie?

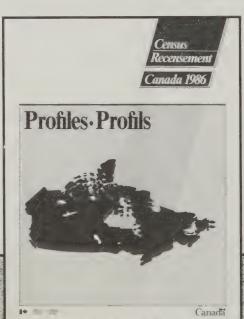

Balayez toute appréhension! Les Profils du recensement de 1986 vous épargneront temps et effort. Chaque Profil présente plus de 46 éléments différents d'information sur chacune des régions répertoriées. Des chiffres de population aux données sur les modes de vie de la population âgée, vous saurez tout.

Vous n'avez qu'à faire votre choix. Et quel choix! Les 52 publications de la série portent sur:

- 6,009 municipalités (subdivisions de recensement);
- 266 comtés (divisions de recensement);
- 282 circonscriptions électorales fédérales;
  - 25 régions métropolitaines de recensement;
  - 114 agglomérations de recensement;
  - diverses régions urbaines et rurales;
  - et plus encore.

Pour de plus amples renseignements, composez le 1-800-267-6677 et demandez notre brochure, qui vous renseignera sur les modalités de commande. Ou, si vous le préférez, écrivez à:

With so many Canadians being injured in job-related accidents, the development of effective occupational health and safety programs should start with **WORK INJURIES 1984-1986.** 

Fifty pages of text and tables present statistics on 28 natures of injury, 9 parts of body, 50 sources of injury, and 16 types of accident. In addition, the data are tabulated by occupation, age and sex of the injured worker, as well as by province and industry of the employer.

To order **Work Injuries** 1984-1986 (#72-208) send cheque or money order for \$22.00 in Canada, (\$23.00 outside Canada), payable to the Receiver General for Canada Publications to: Publications Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or, using Visa or, MasterCard, call toll-free 1-800-267-6677.

Quand arrive le temps de mettre sur pied des programmes de santé et de sécurité au travail, on doit pouvoir compter sur des données à jour et fiables concernant les accidents du travail et les victimes de ces accidents. C'est ce genre de données que renferme **Accidents du travail**, 1984-1986.

Les cinquante pages de texte et de tableaux que contient cette publica tion présentent des statistiques sur 28 types et 50 causes de lésions, 9 des parties du corps les plus sou vent lésées et 16 genres d'accidents. En outre, les données sont totalisées selon la profession, l'âge et le sexe du travailleur blessé, ainsi que selon la province et l'activité économique de l'employeur

Pour commander Accidents du travail, 1984-1986 (n° 72-208 au répertoire), envoyez un chèque ou un mandat-poste (\$22 au Canada: \$23 à l'étranger) fait à l'ordre du Receveur général du Canada Publications à: Ventes des publica tions, Statistique Canada, Ottawa (Ontario), K1A 0T6, ou téléphonez au numéro sans frais 1-800-267-6677 et portez votre commande à votre compte Visa ou MasterCard
